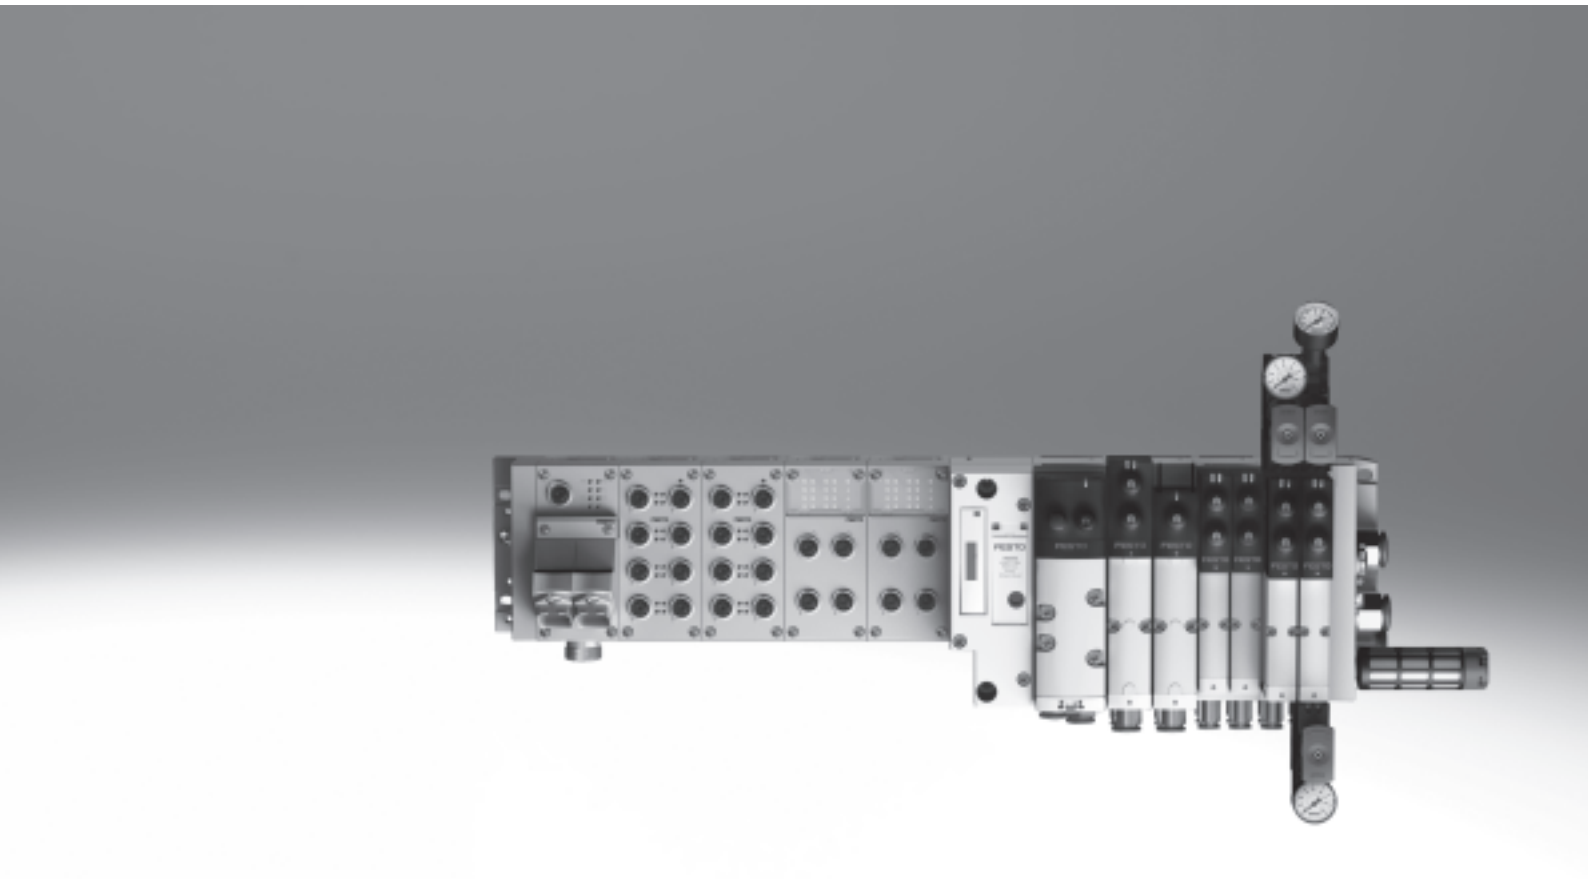
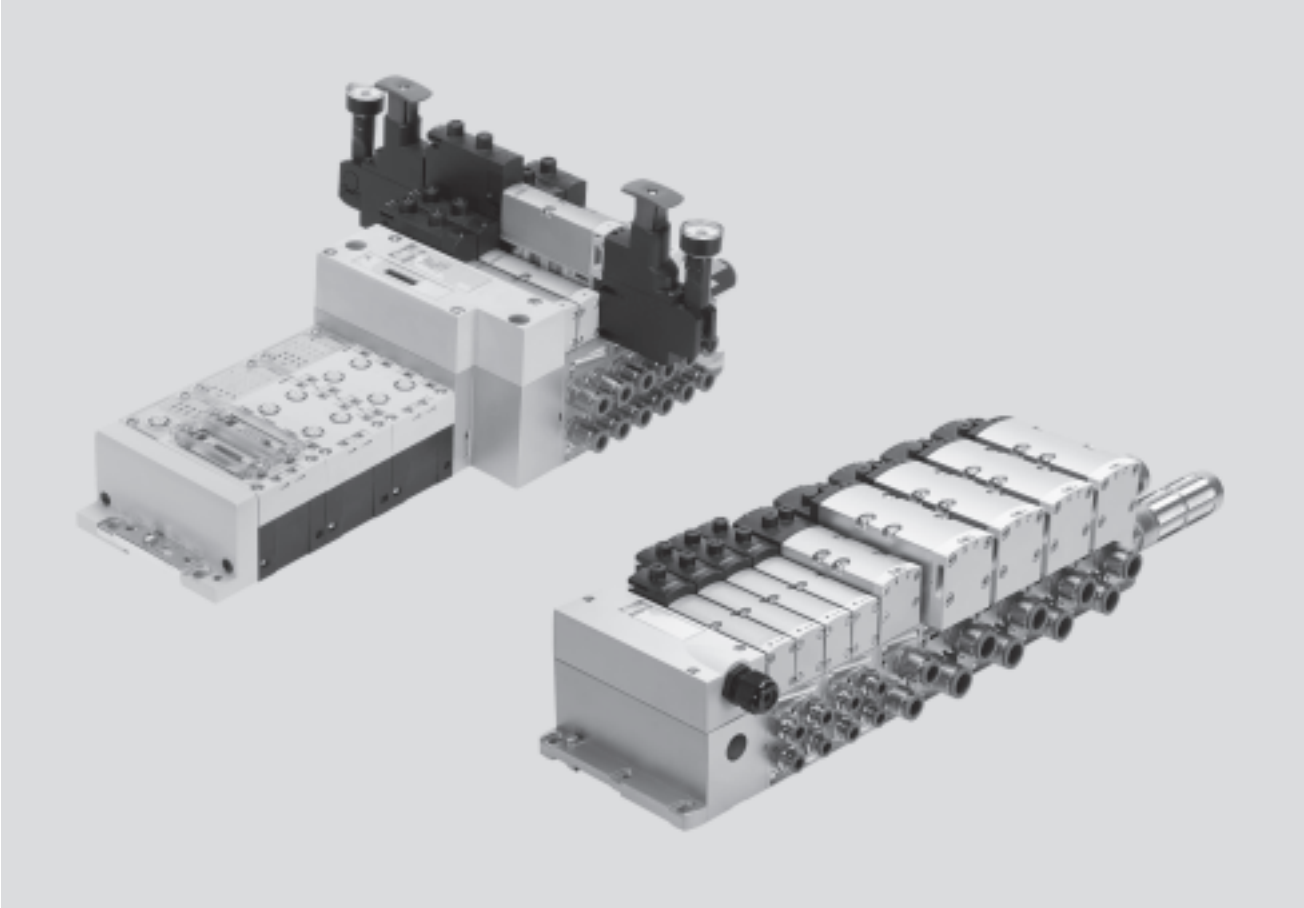
Valve terminals type 44/45, VTSA/VTSA-F

FESTO



Valve terminals type 44/45, VTSA/VTSA-F

Key features – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm



Innovative

- High-performance valves in sturdy metal housing
- Four valve sizes on one valve terminal
- Standardised from the multi-pin plug to the fieldbus connection and control block
- Dream team: fieldbus valve terminal suitable for CPX electrical peripherals. This means:
  - Forward-looking internal communication system for actuating the valves and CPX modules
  - Four valve sizes on one valve terminal without adapters
- Valve functions for integration in control architectures of higher categories to EN ISO 13849-1

Versatile

- Modular system offering a range of configuration options
- Expandable with up to 32 solenoid coils
- Conversions and extensions are possible at any time
- Manifold sub-bases can be extended using four screws, sturdy duct separation on metal substrate
- Integration of innovative function modules possible
- Supply plates enable a flexible air supply and variable pressure zones
- Reverse operation
- High pressure range
  –0.9 ... 10 bar
  Flow range from 400 l/min up to 2,900 l/min
- Wide range of valve functions
- Valve supply: 24 V DC or 110 V AC

Reliable

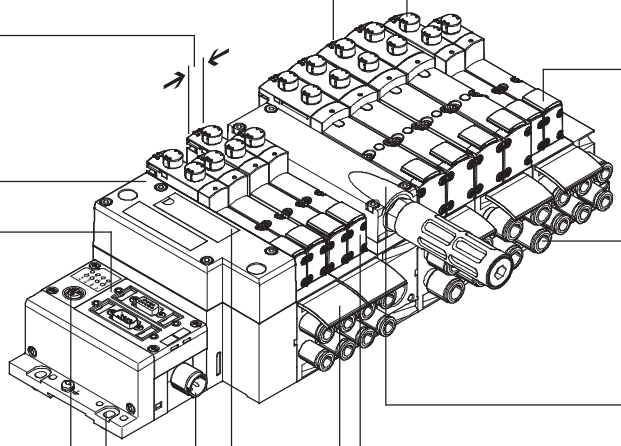
- Sturdy and durable metal components
  - Valves
  - Manifold sub-bases
  - Seals
- Fast troubleshooting thanks to LEDs on the valves and diagnostics via fieldbus
- Reliability of service thanks to valves that can be replaced quickly and easily
- Manual override either non-detenting, non-detenting/detenting or covered
- Durable thanks to tried-and-tested piston spool valves
- Large and durable labelling system
- 100% duty cycle

Easy to mount

- Ready-to-install and tested unit
- Lower selection, ordering, installation and commissioning costs
- Secure mounting on wall or H-rail

Valve terminals type 44/45, VTSA/VTSA-F

Key features – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm



Reduced downtimes:
On-the-spot diagnostics via LEDs

Width 18 mm, 26 mm, 42 mm and 52 mm can be combined on a single valve terminal without adapter

Pneumatic interface to CPX

Simple electrical connections
- Fieldbus connection via CPX
- Multi-pin plug connection with pre-assembled cable or terminal strip (Cage Clamp®)
- Control block via CPX
- AS-interface
- Individual connection

CPX diagnostic interface for handheld devices (channel-oriented diagnostics down to the individual valve)

Quick mounting:
Direct mounting using screws or H-rail

Safe:
Valves, outputs and logic voltage can be switched off separately

Reliable operation:
Manual override, non-detenting/detenting or covered

Flexible:
- 32 valve positions/32 solenoid coils
- One valve series for a wide range of flow rates

Functional:
Large ports, flow-optimised ducts, sturdy metal thread or pre-assembled QS connectors

Modular:
Supply plates facilitate the creation of multiple pressure zones as well as numerous additional exhaust and supply ports

Comprehensive range of valve functions

Practical:
Large inscription labels

Equipment options

Valve functions

- 2x 2/2-way valve, single solenoid, pneumatic spring, normally closed
- 2x 3/2-way valve, single solenoid
  - Normally open
  - Normally open, reversible
  - Normally closed
  - Normally closed, reversible
- 2x 3/2-way valve, single solenoid
  - 1x normally open, 1x normally closed
  - 1x normally open, 1x normally closed, reversible
- 5/2-way valve
  - Single solenoid, pneumatic spring/mechanical spring
  - Double solenoid
  - Double solenoid with dominant signal
- 5/2-way valve for special functions, single solenoid
  - Mechanical spring
  - Switching position sensing via inductive sensors with PNP or NPN output
  - Protection against unexpected start-up to EN 1037
  - Reversing
- 5/3-way valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted
- 5/3-way valve for special functions
  - Switching position 14 with memory function (switching position 14 is retained in the event of an emergency-stop application/power failure) since there is no spring return on switching position 12
  - Only for valve terminal (plug-in)
  - Mid-position exhausted or mid-position 1⇢2, 4⇢5
  - Switching position 14 with memory function
  - Pneumatic spring return
- Soft-start valve for slow and safe pressure build-up
  - High degree of safety
  - Safe pressurisation by means of sensor function

Valve terminals type 44/45, VTSA/VTSA-F

Key features – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Special features

Individual valve on individual sub-base up to width 52 mm

Plug-in

- Electrical connection via standardised 4-pin M12 plug or via 4-pin spring-loaded terminal for configuration by the user
- Available with internal/external pilot air supply

Square plug or plug-in, with integrated piston position sensing

- Electrical connection to DIN EN 175301-803 type C (square design) or for configuration by the user via 4-pin spring-loaded terminal or cable with open end

Valve terminal with fieldbus connection and electrical peripherals

Type CPX

- Max. 32 valve positions/ max. 32 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Valve terminal with individual connection

- Max. 20 valve positions/ max. 20 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Valve terminal with multi-pin plug connection

- Max. 32 valve positions/ max. 32 solenoid coils
- Parallel modular valve linking
- Any compressed air supply
- Any number of pressure zones

AS-interface

- 1 to 8 valve positions/ max. 8 solenoid coils
- Soft-start valve for slow and safe pressure build-up
  - High degree of safety
  - Safe pressurisation by means of sensor function

Combinable

- Width 18 mm: valve flow rate up to 550 (700) l/min
- Width 26 mm: valve flow rate up to 1,100 (1,400) l/min
- Width 42 mm: valve flow rate up to 1,400 l/min
- Width 52 mm: valve flow rate up to 2,900 l/min
- Width 18 mm, 26 mm, 42 mm and 52 mm can be combined on a single valve terminal

Note

- Valve terminal VTSA complies with ISO 15407-2 in width 18 and 26 mm and
- with ISO 5599-2 in width 42 and 52 mm

Values in brackets apply to VTSA-F

Valve terminal configurator

➔ Internet: www.festo.com

A valve terminal configurator is available to help you select a suitable VTSA/VTSA-F valve terminal. This makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually tested. This reduces assembly and installation time to a minimum.

You order a valve terminal VTSA using the order code:

Ordering system for VTSA
➔ Internet: vtsa

Ordering system for CPX
➔ Internet: cpx

You order a valve terminal VTSA-F using the order code:

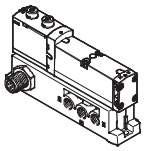
Ordering system for VTSA-F
➔ Internet: vtsa-f

Ordering system for CPX
➔ Internet: cpx

Valve terminals type 44/45, VTSA/VTSA-F

Key features – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

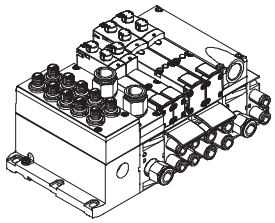
Individual pneumatic connection



Valves on individual sub-bases up to width 52 mm can be used for actuators further away from the valve terminal.

The electrical connection is established either via a standardised 4-pin M12 plug 24 V DC (EN 61076-2-101), 4-pin spring-loaded terminal or a cable with open end 24 V DC or 110 V AC, which are configured by the user.

Valve terminal with individual electrical connection

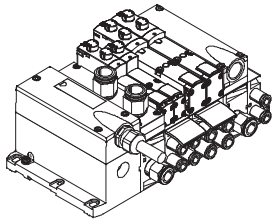


Control signals from the controller to the valve terminal are transmitted via an individual connecting cable.

The valve terminal can be equipped with max. 20 valves and max. 20 solenoid coils.

The electrical connection is established via a 5-pin M12 plug 24 V DC.

Valve terminal with multi-pin plug connection



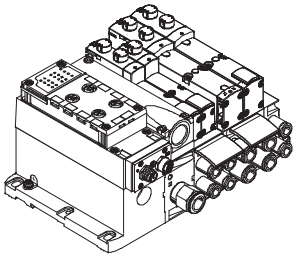
Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-wire cable or a self-assembled multi-pin plug connection (spring-loaded terminal), which substantially reduces installation time.

The valve terminal can be equipped with max. 32 valves and max. 32 solenoid coils.

Versions

- Multi-pin plug connection with terminal strip (spring-loaded terminal) 24 V DC or 110 V AC
- Pre-assembled connecting cable 24 V DC
- Sub-D plug connector for assembly by the user, 37-pin
- Round plug connector M23, 19-pin, 24 V DC

AS-interface connection



A special feature of the AS-interface is the simultaneous transmission of data and supply power via a two-wire cable. The encoded cable profile prevents connection with incorrect polarity.
The valve terminal with AS-interface is available in the following versions:

- With one to eight modular valve positions (max. 8 solenoid coils). This corresponds to one to eight VSVA valves.
- With all available valve functions.

The connection technology used for the inputs can be selected as with CPX: M8, M12, quick connection, Sub-D, spring-loaded terminal (terminals to IP20).

More information
➔ Internet: as-interface

- Note

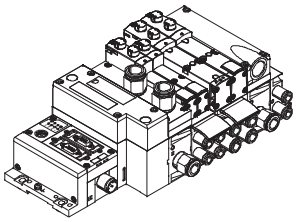
The valve terminal VTSA/VTSA-F with AS-interface connection is based on the same electrical manifold module as the valve terminal with multi-pin plug connection. This means it is possible to convert a valve terminal with multi-pin plug connection using an AS-interface module (➔ 96). The technical specifications of the AS-interface system must be observed in this case.

➔ Page 52
➔ Internet: as-interface

Valve terminals type 44/45, VTSA/VTSA-F

Key features – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Valve terminal with fieldbus connection from the CPX system



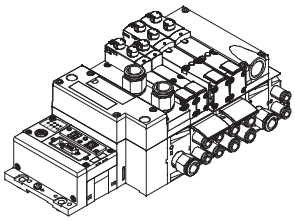
An integrated fieldbus node manages the communication connection with a higher-order PLC. This enables a space-saving pneumatic and electronic solution.

Valve terminals with fieldbus interfaces from the CPX system can be configured with up to 16 manifold sub-bases. With 2 solenoid coils per connection, up to 32 solenoid coils can thus be actuated.

Versions
- Profibus DP
- Interbus
- DeviceNet
- CANopen
- CC-Link
- CPX terminal
- Ethernet/IP
- EtherCAT
- CoDeSys controller
- Modbus/TCP
- PROFINET

➔ Internet: cpx

Valve terminal with control block connection from the CPX system



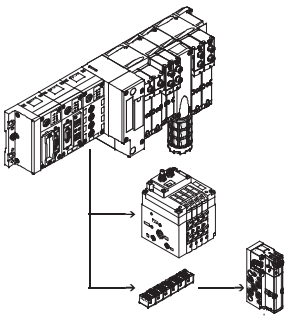
A controller integrated in the Festo valve terminal enables the construction of stand-alone control units with protection to IP65 without a control cabinet thanks to two different operating modes.

In the slave operating mode, these valve terminals can be used for intelligent preprocessing and are therefore ideal modules for designs using decentralised intelligence.

In the master operating mode, terminal groups can be designed with many options and functions that can autonomously control a medium-sized machine/system.
- CPX terminal

➔ Internet: cpx

CP string extension from the CPX system



The optional CP string extension enables additional valve terminals and I/O modules to be connected to the fieldbus node of the CPX terminal on up to 4 CP strings. Different input and output modules as well as CPV-SC, CPV and CPA valve terminals can be connected.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

One CP string offers:
- 32 input signals
- 32 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output module

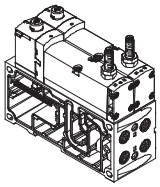
➔ Internet: ctec

Valve terminals type 44/45, VTSA/VTSA-F

Key features – Valves

FESTO

Solenoid valve with switching position sensing, width 26 mm



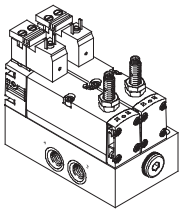
The single solenoid 5/2-way valve with spring return in width 26 mm features switching position sensing. The normal position of the piston spool valve is monitored.

Designed as plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC.

It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

➔ Page 99

Control block with safety function, width 26 mm



These valves are used for special applications, for example for:

- Protecting against unexpected start-up
- Reversing
- Drives in manually loaded devices

This control block is suitable for use as a press safety valve to EN 962.

This valve is a safety component in accordance with the Machinery Directive 2006/42/EC.

➔ Page 105

For holding, blocking a movement (mechanically)

5/3-way valve for special functions; port 2 is pressurised, port 4 exhausted. Switching position 14 features a memory function.

Possible applications:

- Using lifting cylinders
- Using rotary cylinders

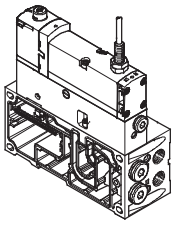
For pressureless switching, self-holding, pneumatic operation

5/3-way valve for special functions (3 phases). Mid-position is exhausted. Switching position 14 features a memory function.

Possible applications:

- Pneumatic manual clamps for devices (insert stations)

Pilot air switching valve, width 26 mm



The pilot air switching valve is designed to switch pilot air from duct 1 to 14.
The piston position sensing feature of the inductive PNP proximity sensor is realised using a cable and a push-in connector in the size M12x1 to EN 61076-2-104.

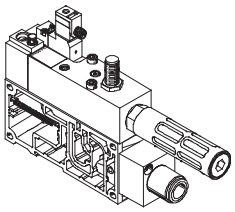
This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC.
It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

➔ Page 112

Note

The pilot air switching valve may only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external pilot air type VABE-S6-1RZ-.... Port 14 on the right-hand end plate must be sealed for this.

Soft-start valve, module width 43 mm



The soft-start valve is separately electrically actuated, independently of the multi-pin plug, AS-interface or fieldbus connection, via a 4-pin plug to ISO 15407-1 or optionally via an M12 adapter.

The valve can optionally be ordered with a sensor that monitors switching of the soft-start valve and in this way supplies the valve terminal or one or more pressure zones with supply air.

The optimum pressure build-up required by the application for each pressure zone is configured directly on the valve terminal by setting the switchover pressure and filling time. A maximum of 5 soft-start valves can be integrated on one valve terminal in this way.

➔ Page 118

Valve terminals type 44/45, VTSA/VTSA-F

Peripherals – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Modular pneumatic peripherals

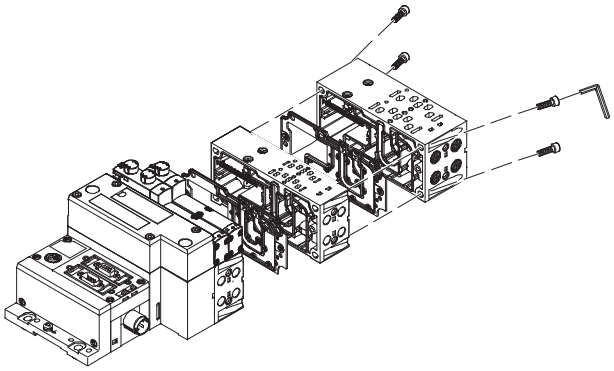
The modular design of the valve terminal VTSA/VTSA-F enables maximum flexibility right from the planning stage and offers maximum ease of service in operation.

The system consists of manifold sub-bases and valves.
The manifold sub-bases are screwed together and thus form the support system for the valves.

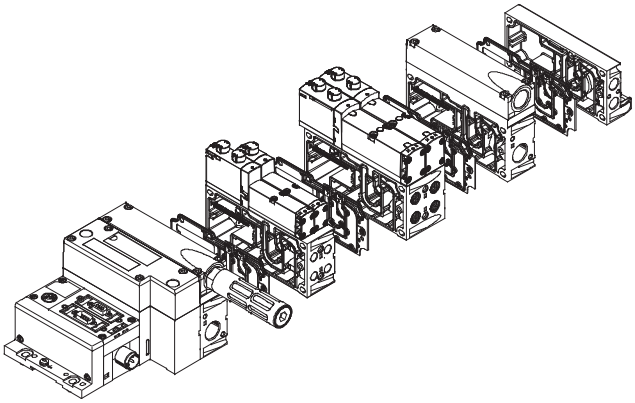
Inside the manifold sub-bases are the connection ducts for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve.

Each manifold sub-base is connected to the next using four screws.
Individual valve terminal sections can be isolated and further blocks easily inserted by loosening these screws.
This ensures that the valve terminal can be rapidly and reliably extended.

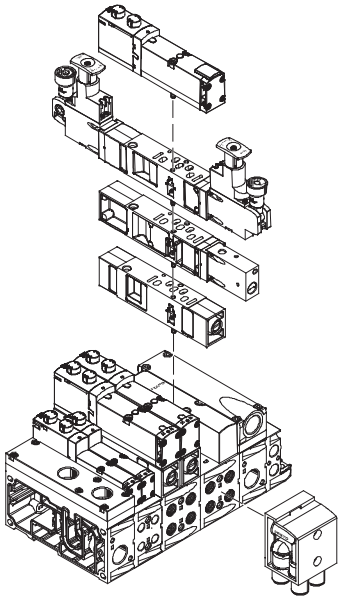
Basic system modularity



Valve modularity



Vertical stacking modularity



Modular electrical peripherals

The manner in which the valves are actuated differs according to whether you are using a multi-pin terminal or fieldbus terminal.

The VTSA/VTSA-F with CPX interface is based on the internal bus system of the CPX and uses this communication system for all solenoid coils and a range of electrical input and output functions.

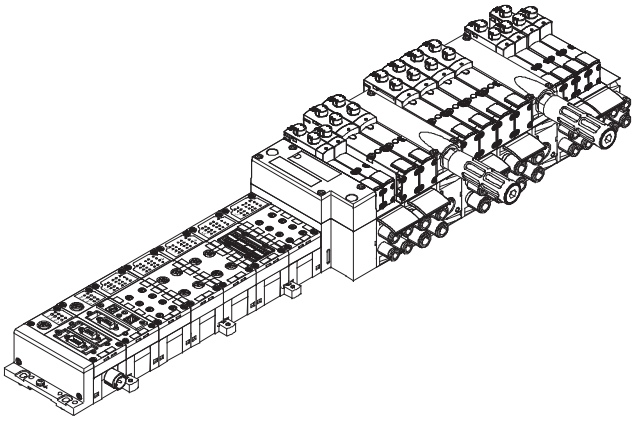
Parallel linking enables the following:

- Transmission of switching information
- High valve density
- Compact design
- Position-based diagnostics

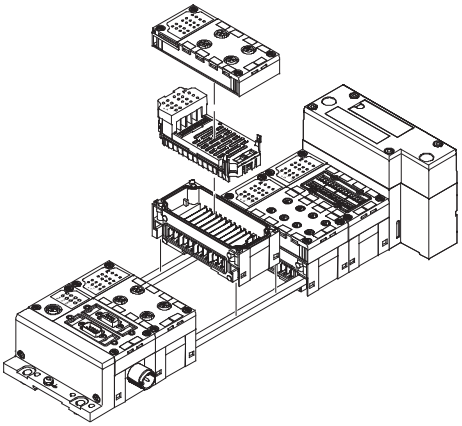
- Separate voltage supply for valves
- Flexible conversion without address shifting
- Option of CP interface
- CPX-FEC as stand-alone controller with access via Ethernet and web server
- Transmission of status, parameter and diagnostic data

➔ Internet: cpx

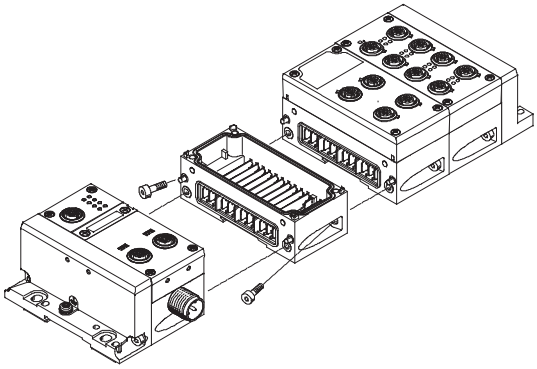
VTSA/VTSA-F with electrical peripherals CPX



Modularity with electrical peripherals CPX



CPX terminal in metal design



The mechanical connection between the CPX modules in metal design is created using special angle fittings. The CPX terminal can thus be expanded at any time.

- Note

The CPX manifold blocks are also available in a metal design. This means a complete solution in a sturdy metal design can be selected for applications of the valve terminal VTSA/VTSA-F in welding environments.

Individual sub-base, width 18 mm, ISO 15407-2

Order code:
- Using individual part numbers

Individual sub-bases can be equipped with any valve.

The electrical connection is established via a standardised 4-pin M12 plug (EN 61076-2-101) or it can be configured by the user via a 4-pin clamped terminal connection/open cable end.

Valve terminal pneumatics

The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for

- 2 single solenoid valves or
- 2 double solenoid valves.

The manifold sub-bases for valves with a width of 42 or 52 mm are suitable for

- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.

Valve terminal with fieldbus/multi-pin plug connection and individually electrically actuated valve

In applications with specific emergency stop conditions, it may be necessary to switch one or more valves separately from the valve terminal controller. Standard valves (VSVA) with individual electrical connection (round or square plug) are mounted on the valve terminal to this end.
In order for protection class IP65 to be achieved, the functionless opening in the sub-base for the electrical connection must be sealed.
A sealing cap is available for the 18 mm and 26 mm widths.

With manifold or individual sub-bases, valves with width 42 mm and 52 mm must be used with a seal to comply with the IP protection class (see ➔ page 95).
For central control of the valve terminal via a multi-pin plug or fieldbus connection, the valve position occupied in this way acts like a vacant position, i.e. the assigned address in the fieldbus node or the corresponding connection in the multi-pin plug connection is occupied.

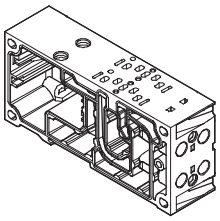
Valve terminals type 44/45, VTSA/VTSA-F

Key features – Pneumatic components – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

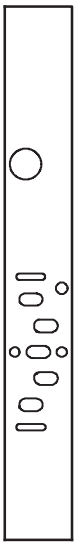
Manifold sub-base



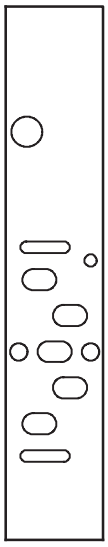
VTSA/VTSA-F is based on a modular system which consists of manifold sub-bases and valves. Manifold sub-bases are available for valve widths 18 mm and 26 mm in a double grid, i.e. two valves per manifold sub-base. For valves with a width of 42 mm or 52 mm, there are manifold sub-bases with one valve per sub-base. The manifold sub-base contains a duct seal and an electrical interlinking module. They can be freely mixed within a valve terminal. The manifold sub-bases are screwed together and thus form the support system for the valves. Inside the manifold sub-bases are the connection ducts for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve. Each manifold sub-base is connected to the next using four screws. Individual valve terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

Port patterns on the manifold sub-base for one valve position

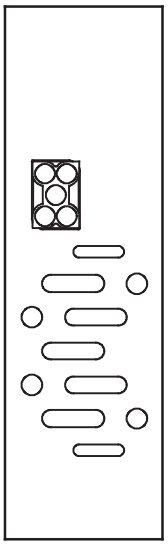
Width 18 mm



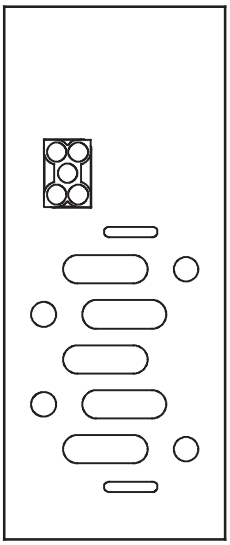
Width 26 mm



Width 42 mm



Width 52 mm



- Note

The illustrations shown depict a schematic representation of the pneumatic ISO port patterns.
The port patterns on the valve terminal VTSA-F do not correspond to the ISO standard.

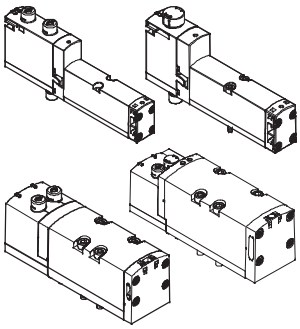
Valve terminals type 44/45, VTSA/VTSA-F

Key features – Pneumatic components – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Sub-base valve



VTSA/VTSA-F offers a comprehensive range of valve functions. All valves are fitted with piston spool and patented sealing system, which ensures efficient sealing, a broad operating pressure range and long service life.

Sub-base valves can be quickly replaced since the tubing connections remain on the sub-base.
Irrespective of the valve function there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils for double solenoid or double valve functions.

Reverse/vacuum operation

Select reverse operation (code Z) if you wish to operate an actuator (cylinder) with different pressures for the forward and return stroke. Please note that the valves must then be operated via a separate pressure zone.

The reversible 3/2-way valves are also suitable for vacuum operation.

Blanking plate

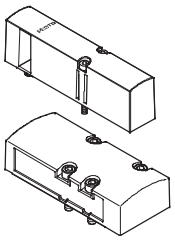


Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold sub-base using screws.

Design

Valve replacement

The valves are attached to the metal manifold sub-base using two screws, which means that they can be easily replaced. The mechanical robustness of the manifold sub-base guarantees efficient long-term sealing.

Expansion

Vacant positions can be fitted with valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged during this process.
The order code VSVA-... is located on the front of the valve beneath the manual override.

Valve terminals type 44/45, VTSA/VTSA-F

Key features – Pneumatic components – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Valve function						
Code	Circuit symbol	Width				Description
		18 mm	26 mm	42 mm	52 mm	
VC		■	■	■	■	2x 2/2-way valve, single solenoid • Normally closed • Pneumatic spring return
VV		■	■	■	–	2x 2/2-way valve, single solenoid • Normally closed • Pneumatic spring return • Vacuum operation possible at 3 and 5
N		■	■	■	■	2x 3/2-way valve, single solenoid • Normally open • Pneumatic spring return • Operating pressure > 3 bar
K		■	■	■	■	2x 3/2-way valve, single solenoid • Normally closed • Pneumatic spring return • Operating pressure > 3 bar
H		■	■	■	■	2x 3/2-way valve, single solenoid • Normal position – 1x closed – 1x open • Pneumatic spring return • Operating pressure > 3 bar
P		■	■	■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normally open • Pneumatic spring return
Q		■	■	■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normally closed • Pneumatic spring return
R		■	■	■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normal position – 1x closed – 1x open • Pneumatic spring return

Note

A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

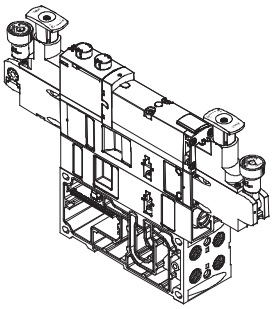
SB		–	■	–	–	5/3-way valve, with enhanced function through signal storage in switching position 14 • Holding, blocking a movement (mechanically) • Mid-position: port 2 pressurised, port 4 exhausted, switching position 14 with memory function • Mechanical spring return
L		■	■	■	■	For valve terminal only: Blanking plate for vacant valve position

1) If neither solenoid coil is energised, the valve moves to its mid-position by means of a mechanical spring. If the two coils are permanently energised one after the other, the valve remains in the switching position of the coil that was activated first.

2) The symbol represents a valve with a proximity sensor with a switching output signal, in the illustration an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of all sensors used here is an N/C contact.

Vertical stacking

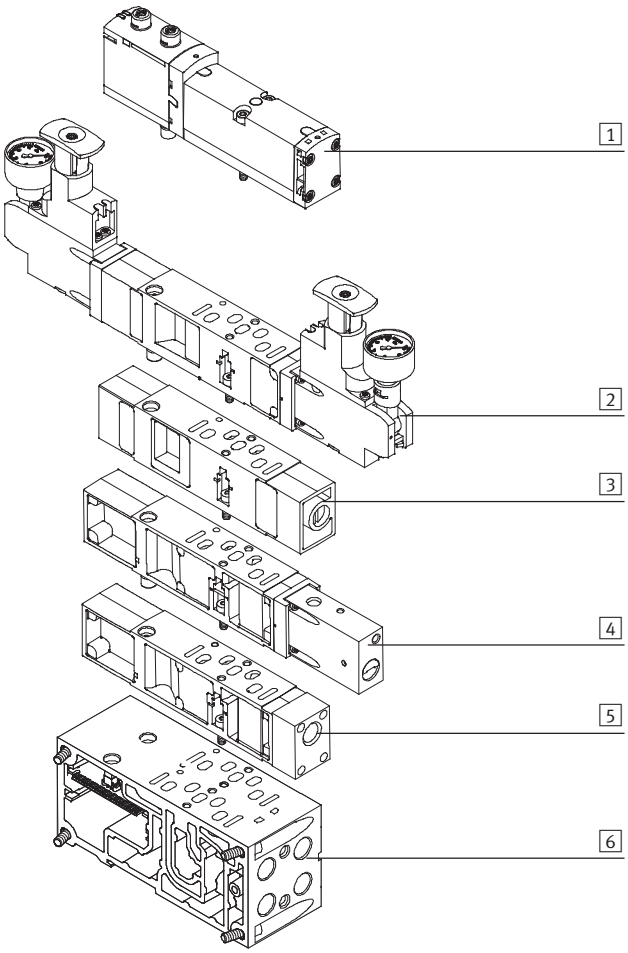


Additional functions can be added to each valve position between the sub-base and the valve. These functions are known as vertical stacking modules and enable special functioning or control of an individual valve position. Combinations of several valve sizes on one valve terminal are possible.

- Note

Certain combinations are not recommended due to the design of the individual vertical stacking components.

Vertical stacking components

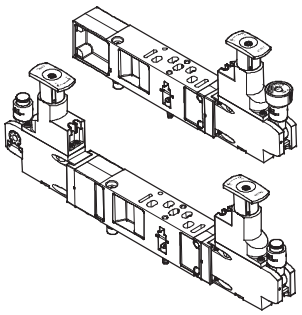


The following component sequence is recommended for valve positions with vertical stacking:

1. ISO valve
2. Pressure regulator plate
3. Flow control plate
4. Vertical pressure shut-off plate
5. Vertical supply plate
6. Manifold sub-base

Vertical stacking

Pressure regulator plate



An adjustable pressure regulator can be installed between the sub-base and the valve in order to control the force of the triggered actuator.

This pressure regulator maintains an essentially constant output pressure (secondary side) independent of pressure fluctuations (primary side) and air consumption. Also suitable for symmetrical valves.

Standard version:
- Standard port pattern to ISO 15407-2 or ISO 5599-2
- For supply pressure up to 6 bar or up to 10 bar
- Without pressure gauge (optional)
- Regulator knob with 3 positions (locked, reference position, free running)

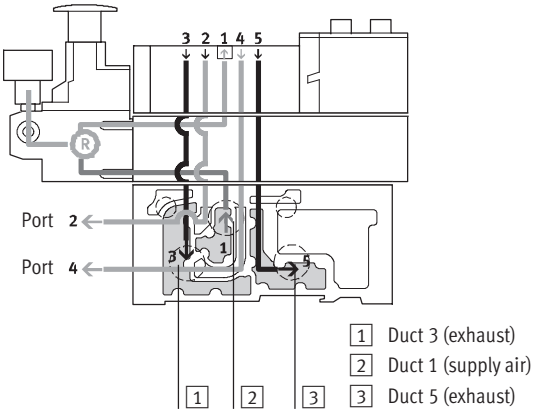
Note

With the A, B and AB pressure regulators VABF-S...-1-..., the control pressure should not be under 2 bar. Use the reversible A, B or AB pressure regulators for control pressures under 2 bar.

Note

Please note for repeat orders:
Certain equipment versions of pressure regulator plates can only be ordered via type codes. The part number imprinted on the regulator plate installed on the VTSA/VTSA-F valve terminal will not match the equipment version in these cases. For that reason, always use the VABF configurator for repeat orders.

Mode of operation of the pressure regulator plate (P regulator) for port 1; code: ZA, ZAY, ZF, ZFY



This pressure regulator regulates the pressure upstream of the valve in duct 1. Ducts 2 and 4 thus have the same regulated pressure.

During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5.

Advantages

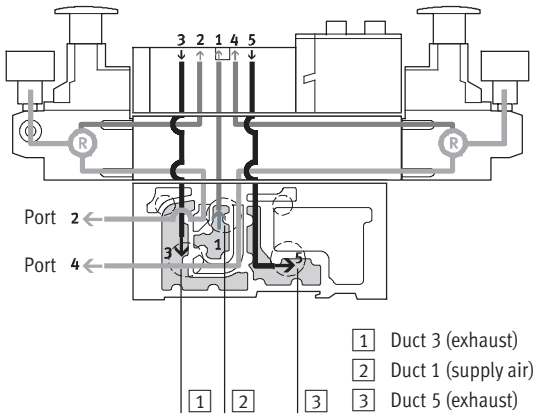
- The pressure regulator is not affected by venting, since the pressure is regulated upstream of the valve.
- The pressure regulator can always be adjusted, since the pressure from the valve terminal is always present.

Application examples

- An equal working pressure is required at working lines 2 and 4.
- A lower working pressure (e.g. 3 bar) than the operating pressure present on the valve terminal (e.g. 8 bar) is required.

Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator) for ports 2 and 4; code: ZD, ZDY, ZI, ZIY



This pressure regulator regulates the pressure in ducts 2 and 4 after the pressure medium flows through the valve. During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5 via the pressure regulator.

Example with the following switching position:
The supply air flows from duct 1 of the manifold sub-base via the valve to duct 2, it is then regulated and made available at port 2 of the manifold sub-base. At the same time, venting takes place via duct 4 of the manifold sub-base, via the regulator and via the valve into duct 5 of the manifold sub-base.

Restrictions

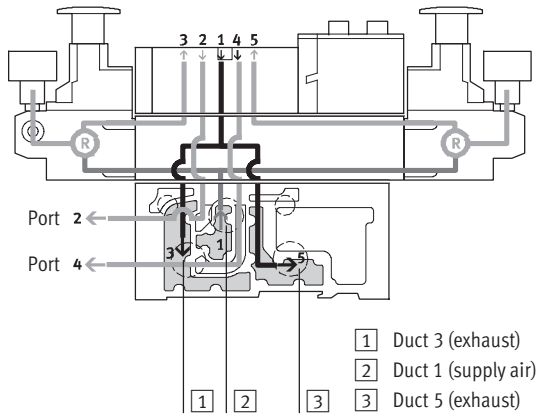
- The pressure regulator cannot be adjusted in the exhaust position. For example, the pressure regulator for duct 4 cannot be adjusted when the valve is pressurised in the switching position from duct 1 to duct 2 and exhausted from duct 4 to duct 5.

Application examples

- When two different working pressures are required at ports 2 and 4 instead of the valve terminal operating pressure.

Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator, reversible) for ports 2 and 4, reversible; code: ZE, ZEY, ZJ, ZJY



With this pressure regulator, the supply air (duct 1) is split and routed directly to both pressure regulators. In each case the regulated supply air is present in ducts 3 and 5 on the valve. The valve is thus operated in reversible mode.
This means:

- Duct 3 routes the working pressure to port 2
- Duct 5 routes the working pressure to port 4

Example with the following switching position:
The supply air in duct 1 is split between ducts 3 and 5 in the regulator and flows from here to the valve. In the valve, the supply air is routed to port 2 of the manifold sub-base. The exhaust air is simultaneously routed via duct 4 of the manifold sub-base and via the valve to regulator duct 1, where it is split between ducts 3 and 5 and then expelled via the manifold sub-base.

Application examples

- When two different pressures are required in ducts 2 and 4 instead of the operating pressure.
- When fast venting is required.
- When the pressure regulator must always be adjustable.

Note

- Reversible pressure regulator plates may only be combined with valves that can be operated in reversible mode.
- Valves in valve positions with vertical pressure shut-off plates are operated with internal pilot air supply, even when the valve terminal is operated with external pilot air supply.
- The following combination of reversible valve terminals with vertical stacking components is not permitted:
  - Reversible pressure regulator plates
  - Flow control plates
  - Vertical pressure shut-off plates
  - Vertical supply plates

Advantages

- Fast cycle times.
- 50% higher exhaust flow rate, as air is not vented via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated upstream of the valve, i.e. the regulator can always be adjusted.

Disadvantages

- 2x 3/2-way valves (code N, K, H) cannot be used, as pressure is present at ports 3 and 5.
- No practical combination with a flow control plate possible.

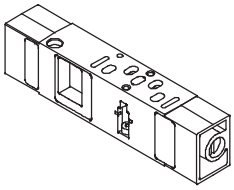
1) These functions are available via the pressure regulator configurator VABF-S2. for width 42 mm and 52 mm (ISO 5599-2, ISO 1 and ISO 2) only.
Alternatively they can be selected for all four sizes in the valve terminal configurator or via their own order numbers in the chapter Accessories on page 91.

2) All variants are only possible for VABF-S2.

Vertical stacking

Flow control plate



The flow control plate is equipped with two flow control valves on which the exhaust air flow rate at exhaust ports 3 or 5 can be adjusted. This enables the movement of the drive to be initiated and the desired speed to be set on the valve terminal using the manual override.

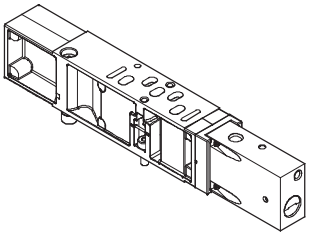
Ducts 3 and 5 can be adjusted independently of each other.

Note

On reversible valve terminals, supply air flow control takes place in ducts 3 and 5 upstream of the valve.

Code		Type	Width				Description
			18 mm	26 mm	42 mm	52 mm	
X		VABF-S4-...F1B1-C	■	■	■	■	• Restricts the exhaust air downstream of the valve in ducts 3 and 5

Vertical pressure shut-off plate



The vertical pressure shut-off plate is equipped with a switch via which the compressed air supply can be shut off. This enables a directional control valve or subsequent vertical stacking plate to be replaced without switching off the overall air supply. If the control chain has a redundant connection, the cycle can continue in the case of a cyclical control system.

Following activation of the shut-off, the exhaust air/return air from the cylinder is expelled via the M5 threaded connection.

Note

It must be ensured that the operating pressure of the valve terminal lies within the range of the required pilot pressure (i.e. min. 3 bar).
When using an end plate with pilot air selector, only end plates with the code W and U can be used.

Code		Type	Width				Description

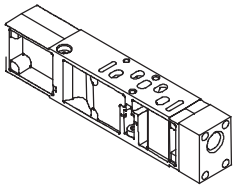
Vertical supply plate



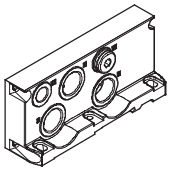
This plate enables a valve to be supplied with individual operating pressure independently of the operating pressure of the valve terminal.

As additional pressure supply for a valve. To supply an additional pressure zone.

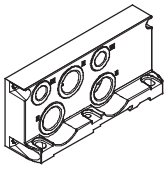
Code		Type	Width				Description
			26 mm	18 mm	42 mm	52 mm	
ZU		VABF-S4-...P1A3-...	■	■	■	■	• Plate with port 11 for supplying individual operating pressure to a valve position

Compressed air supply and venting

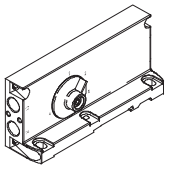
Right-hand end plate
- Code V
- Internal pilot air supply



Right-hand end plate
- Code X
- External pilot air supply

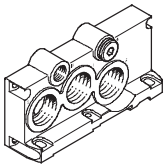


End plate with pilot air selector
- Code Z, Y, W, U

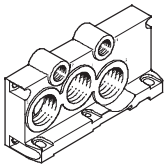


The valve terminal VTSA/VTSA-F can be supplied with compressed air at one or more points. This is a reliable way of ensuring that all functional components will always offer good performance, even with large-scale extensions. The valve terminal is supplied via supply plates (max. 16 per valve terminal) or via an end plate.

Right-hand end plate
- Code V1
- Internal pilot air supply

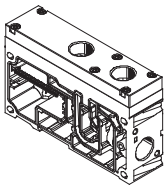


Right-hand end plate
- Code X1
- External pilot air supply

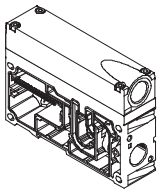


Venting is via silencers or ports for ducted exhaust air on the supply plates and/or on the right-hand end plate. There are two types of supply plates:
- Exhaust port 3/5 common
- Exhaust port 3/5 separated

Port configuration for supply plates
Exhaust port 3/5 separated
- Code K



Port configuration for supply plates
Exhaust port 3/5 common
- Code L



Pilot air supply

The port for the pneumatic supply is located on the supply plates or the right-hand end plate.

The ports differ for the following types of pilot air supply:
- Internal
- External

- Note

If a gradual pressure build-up is required in the system by means of a soft-start valve, then external pilot air should be selected whereby the pilot pressure is already applied at the point of switch-on.

Internal pilot air supply

Internal pilot air supply can be selected if the working pressure is between 3 and 10 bar.

The pilot air supply is then branched from the compressed air supply 1 using an internal connection. Port 14 on the right-hand end plate is sealed with a blanking plug.

External pilot air supply

If the supply pressure is less than 3 bar, you must operate your valve terminal VTSA/VTSA-F using external pilot air supply.

The pilot air supply is then supplied via port 14 on the right-hand end plate. This is the case even if the valve terminal is operated with different pressure zones.

Additional compressed air supply/duct separation

Additional supply plates can be used for larger valve terminals or to create additional pressure zones.
These can be selected at any point upstream or downstream of the manifold sub-bases.

Supply plates contain the ports:
- Compressed air supply (1)
- Exhaust port (3/5) common or separated

Depending on your order, the exhaust air ducts are either ducted or vented via silencers.

VTSA/VTSA-F with ducted exhaust air:
With ducted exhaust air, venting can be via a supply plate or a right-hand end plate (code V or X).

If duct separation is required, there are three different options:
- Duct separation 1, 3, 5: code S
- Duct separation 1: code T
- Duct separation 3, 5: code R

If a combination of duct separation (S, T or R) and one or two supply plates is required, the following variants can be selected:
- Supply plate with duct separation on the left-hand side: code SU, TU, RU
- Supply plate with duct separation on the right-hand side: code US, UT, UR
- 2 supply plates with intermediate duct separation: code USU, UTU, URU

Supply plates

Code		Type	Width				Description

Right-hand end plate

Different right-hand end plates are available.

With the following two end plates, the outgoing direction of the ports is aligned with the horizontal stacking direction.
Right-hand end plates with pilot air supply/pilot exhaust air

- Internal pilot air supply: code V, V1 and V2
- External pilot air supply: code X, X1 and X2

For end plates with pilot air selector, the outgoing direction of the ports is to the front of the valve terminal. This means that all the ports on the valve terminal can be combined in one outgoing direction.
The special feature of the end plates with pilot air selector is the selector switch itself, which has four settings for different pilot air supply/pilot exhaust air.

End plates with pilot air selector switch set at the factory for:

- External pilot air supply: code Z
- Internal pilot air supply: code Y
- External pilot air supply, ducted pilot exhaust air: code W
- Internal pilot air supply, ducted pilot exhaust air: code U

Note

The end plate with pilot air selector must be used in combination with a supply plate.
The reversible 3/2-way valves (code P, Q, R) must only be operated in selector position 1 or 2.
Ducted pilot exhaust air via port 12 is only possible with turned seals on the valve.

Right-hand end plate

Code	Pilot supply air	Seal turned, pilot exhaust air ducted at port 12	Connecting thread 1, 3, 5	Connecting thread 12, 14
V, V1, V2	Internal	■	G½	G¼

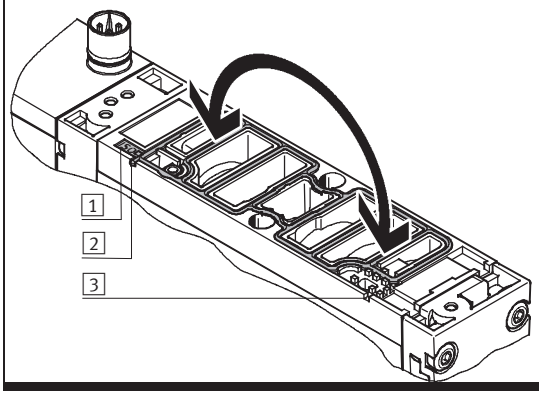
Handling of the seals with ducted/unducted pilot exhaust air



Unducted pilot exhaust air:

- The seal is visible in the inspection window on control side 14.
- The ISO mark is visible on the designation label on the seal surface.

Ducted pilot exhaust air:

- The seal is visible in the inspection window on control side 12.
- The ~~ISO~~ mark is visible on the designation label on the seal surface.

1 Designation label
2 Inspection window on control side 14
3 Inspection window on control side 12

Right-hand end plate							
Code	Type of compressed air supply and pilot air supply		Width				Description
			18 mm	26 mm	42 mm	52 mm	
	Right-hand end plate						
V V1 V2			■	■	■	■	Internal pilot air supply • Pilot air supply is branched internally from port 1 • Port 14 is sealed with a blanking plug • Exhaust air via ports 3 and 5 • For operating pressure in the range 3 … 10 bar • Pilot exhaust air via port 12[1)]
X X1 X2			■	■	■	■	External pilot air supply • Pilot air supply between 2 and 10 bar is connected at port 14 • Exhaust air via ports 3 and 5 • For operating pressure in the range 0.9 … 10 bar (suitable for vacuum) • Pilot exhaust air via port 12[1)]
XP1			■	■	■	■	External pilot air supply, pressure supply via soft-start valve[2)] • Port 1 is sealed with a blanking plug • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12[1)]
XP2			■	■	■	■	External pilot air supply, pressure supply via soft-start valve[2)] • Internal pilot air supply 14 via soft-start valve • Ports 1 and 14 are sealed with a blanking plug • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12[1)]
XP3			■	■	■	■	External pilot air supply, pressure supply via soft-start valve[2)] • Internal pilot air supply 14 via soft-start valve • Ports 1, 3, 5 and 14 are sealed with a blanking plug • Pilot exhaust air via port 12[1)]

1) Ducted pilot exhaust air is only possible with turned seals on the valve
2) Application with XP1, XP2, XP3 and soft-start valve in combination with valves of width 52 mm: please note the maximum flow rate of the soft-start valve in this pressure zone

Right-hand end plate

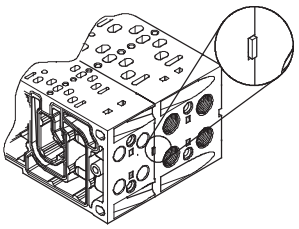
Creating pressure zones and separating exhaust air

The valve terminal VTSA/VTSA-F offers a number of options for creating pressure zones if different working pressures are required.
Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by means of appropriate duct separation.

Compressed air is supplied and vented via a supply plate.
The position of the supply plates and duct separations can be freely selected for VTSA/VTSA-F.

Duct separations are integrated ex-works as per your order.
Duct separations can be distinguished by their coding, even when the valve terminal is assembled.



Creating pressure zones

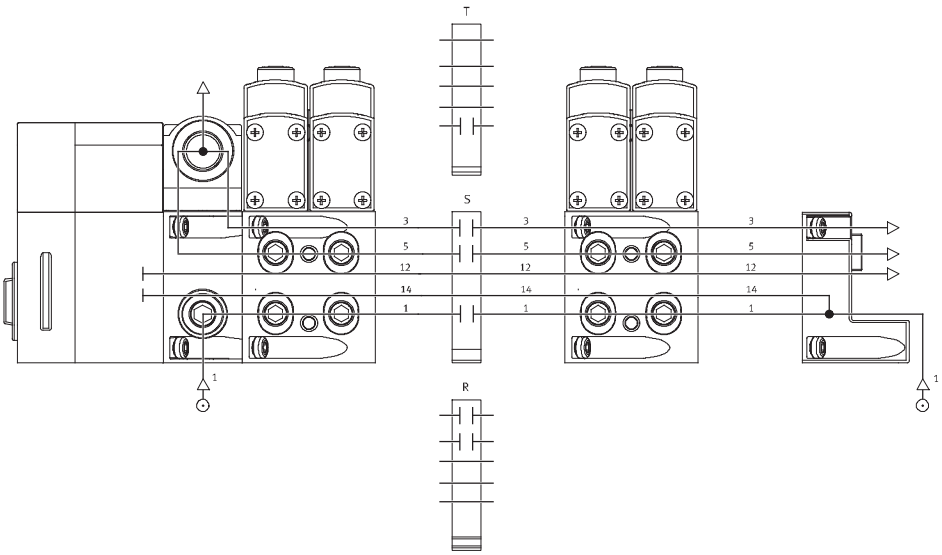
Code	Separating seal		Width				Description
	Pictorial examples	Coding	18 mm	26 mm	42 mm	52 mm	
T			■	■	■	■	Duct 1 separated
S			■	■	■	■	Ducts 1, 3 and 5 separated
R			■	■	■	■	Ducts 3 and 5 separated

Examples: Compressed air supply and pilot air supply, right-hand end plate

Internal pilot air supply, silencer/ducted exhaust air

Right-hand end plate: code V and V1
The diagram opposite shows an example of the configuration and connection of the compressed air supply with internal pilot air supply.
Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is expelled via the silencer.
Duct separations can optionally be used to create pressure zones.

Optional duct separation



Examples: Compressed air supply and pilot air supply, right-hand end plate

External pilot air supply, silencer/ducted exhaust air

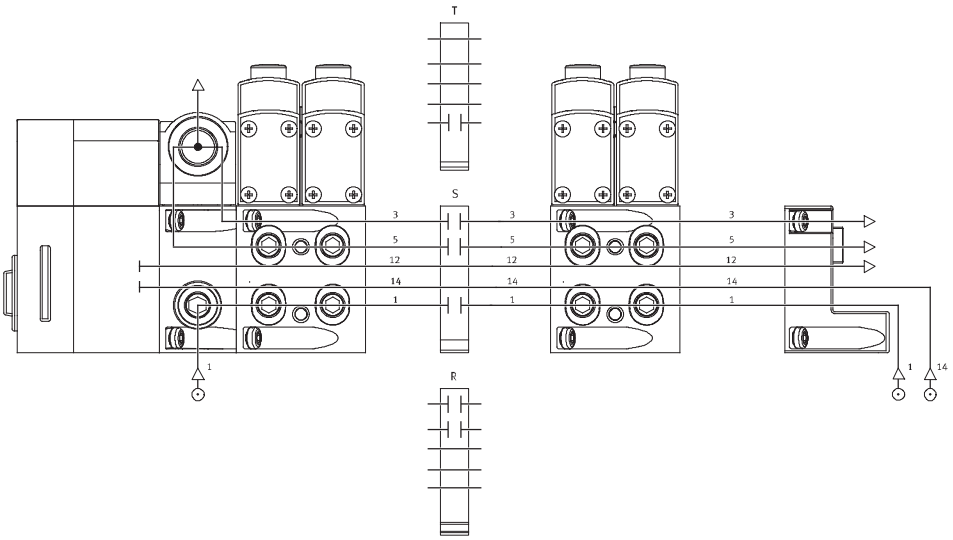
Right-hand end plate: code X and X1

The diagram opposite shows an example of the configuration and connection of the compressed air supply with external pilot air supply.

Port 14 on the right-hand end plate is equipped with a fitting for this. At exhaust port 3/5 the air is expelled via the silencer.

Duct separations can optionally be used to create pressure zones.

Optional duct separation



Examples: Compressed air supply and pilot air supply via end plate with pilot air selector

Internal pilot air supply, ducted exhaust air/silencer

Right-hand end plate: code U

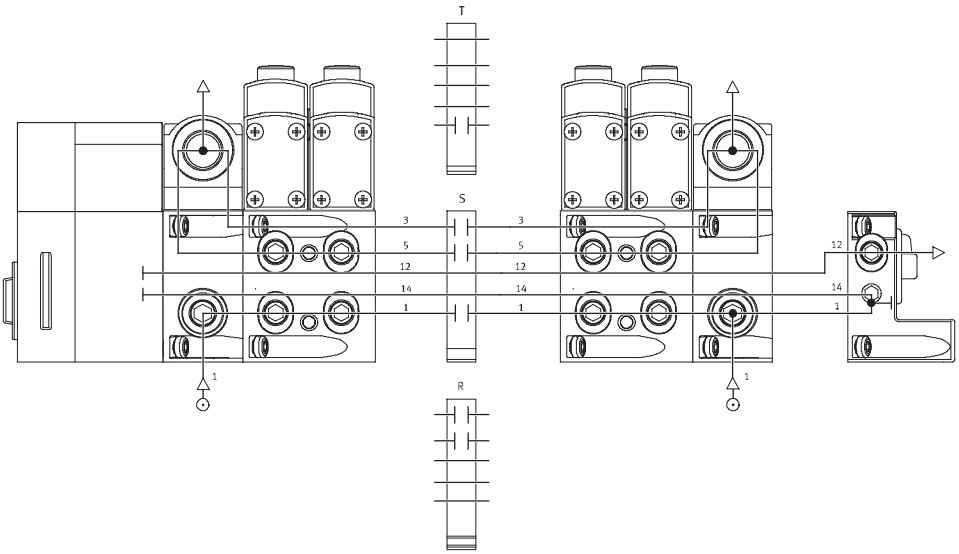
The diagram opposite shows an example of the configuration and connection of the compressed air supply with internal pilot air supply.

Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is ducted or expelled via the silencer.

The selector switch in the pilot air selector is in position 4.

Duct separations can optionally be used to create pressure zones.

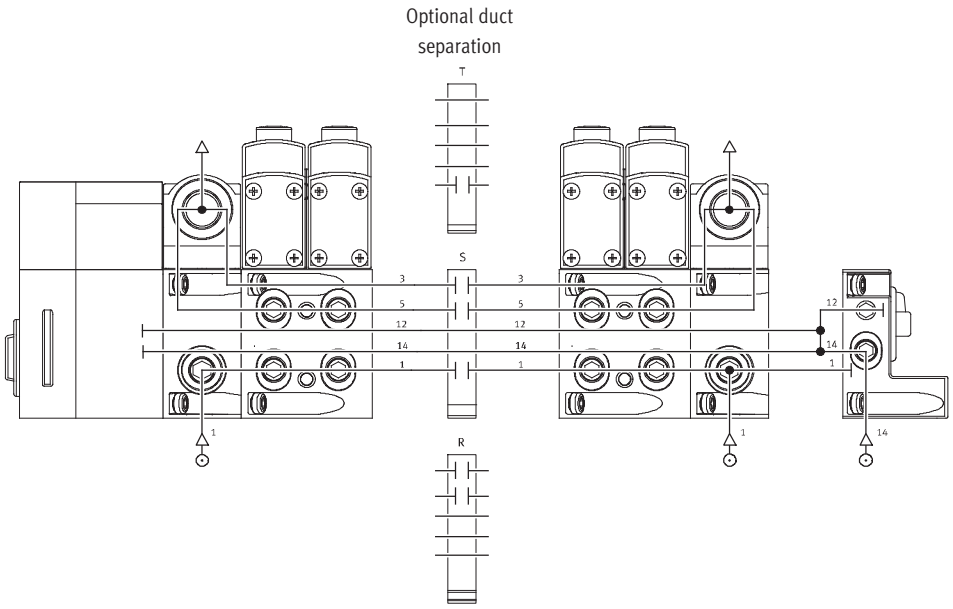
Optional duct separation



Examples: Compressed air supply and pilot air supply via end plate with pilot air selector

External pilot air supply, ducted exhaust air/silencer

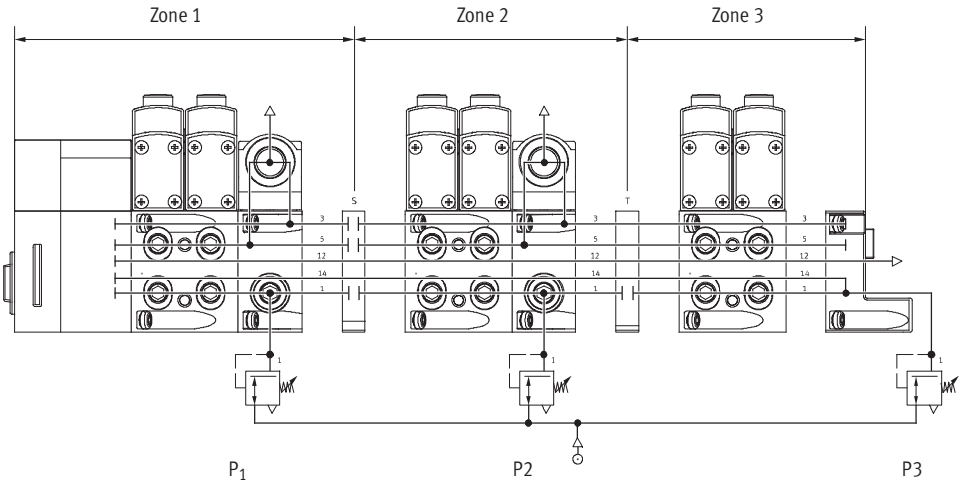
Right-hand end plate: code Z
The diagram opposite shows an example of the configuration and connection of the compressed air supply with external pilot air supply. Port 14 on the right-hand end plate is equipped with a fitting for this. Port 12 is sealed with a blanking plug since it is internally connected with port 14. At exhaust port 3/5 the air is ducted or expelled via the silencer. The selector switch on the pilot air selector is in position 1. Duct separations can optionally be used to create pressure zones.



Examples: Creating pressure zones

VTSA/VTSA-F with CPX terminal connection

VTSA/VTSA-F facilitates the creation of up to 16 pressure zones (up to 32 pressure zones if only size 1, ISO 5599-2, is fitted). The diagram shows an example of the configuration and connection of three pressure zones using duct separations – with internal pilot air supply.



Valve terminals type 44/45, VTSA/VTSA-F

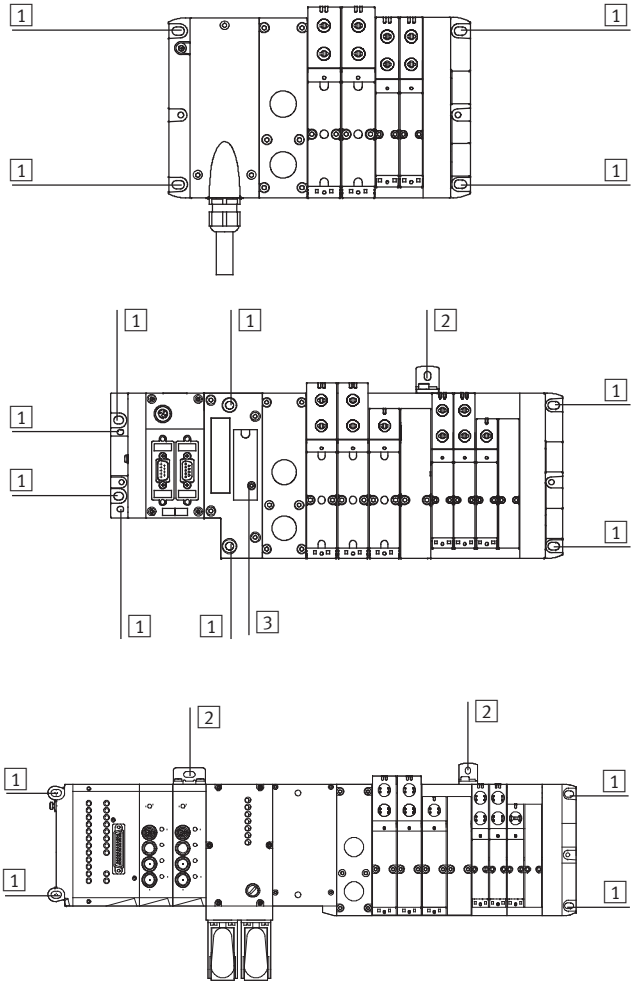
Key features – Mounting – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Valve terminal mounting

Sturdy valve terminal mounting thanks to:

- Four through-holes for wall mounting
- Additional mounting brackets
- H-rail mounting

Wall mounting



The valve terminal VTSA/VTSA-F is screwed onto the mounting surface using M6 screws. The mounting holes are located at the following points:

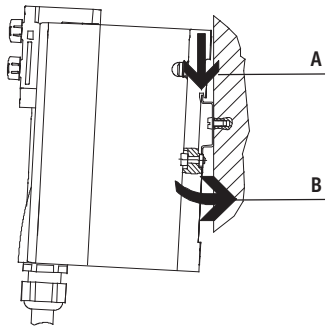
- Multi-pin plug (4 pieces):
  2 each on the multi-pin connection block and the right-hand end plate
- Fieldbus, CPX (4 pieces):
  2 each on the left-hand (CPX) and right-hand (VTSA, VTSA-F) end plate. The pneumatic interface additionally provides further mounting holes as well as optional mounting brackets.

1 Hole for M6 screw
2 Hole for M5 screw
3 Hole for H-rail mounting

- Note

When wall mounting valve terminals with more than five manifold sub-bases, use additional mounting brackets of the type VAME-S...-10-W to prevent damage to the valve terminal. The mounting brackets are mounted on the pneumatic supply plates.

H-rail mounting



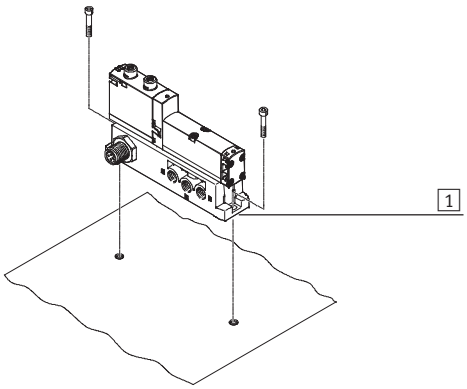
The valve terminal VTSA/VTSA-F is hooked onto the H-rail (see arrow A). It is then swivelled onto the H-rail and secured in place with the clamping component (see arrow B).

For H-rail mounting of the valve terminal you will need the following VTSA/VTSA-F mounting kit:

- CPX-CPA-BG-NRH

This permits mounting of the valve terminal on an H-rail to EN 60715.

Individual valve mounting



1 Vertical mounting holes

The individual sub-base for wall mounting is designed for integration into a system or machine. It is mounted vertically.

Display and operation

Each solenoid coil is allocated an LED which indicates its switching status.

- Indicator 12 shows the switching status of the pilot control for output 2
- Indicator 14 shows the switching status of the pilot control for output 4

Manual override

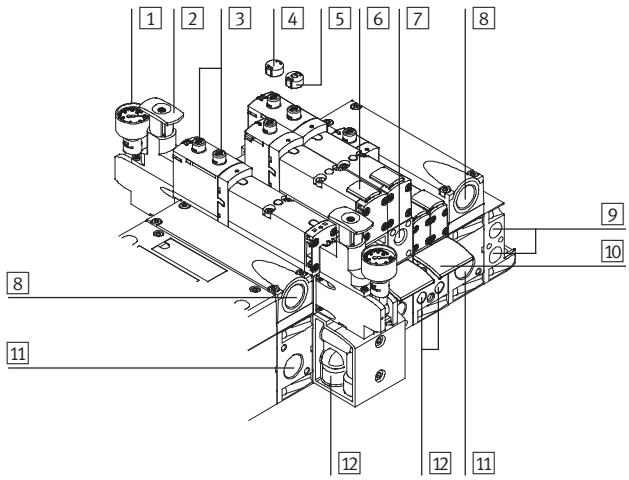
The manual override enables the valve to be switched when not electrically actuated or energised.

The valve is switched by pushing the manual override. The set switching status can also be locked by turning the manual override.

Alternatives:

- A cover cap (accessory code N) can be fitted over the manual override to prevent it from being turned. The valve can then only be actuated by pressing it.
- A cover (code V) can be fitted over the manual override to prevent it from being accidentally actuated.

Pneumatic connection and control elements

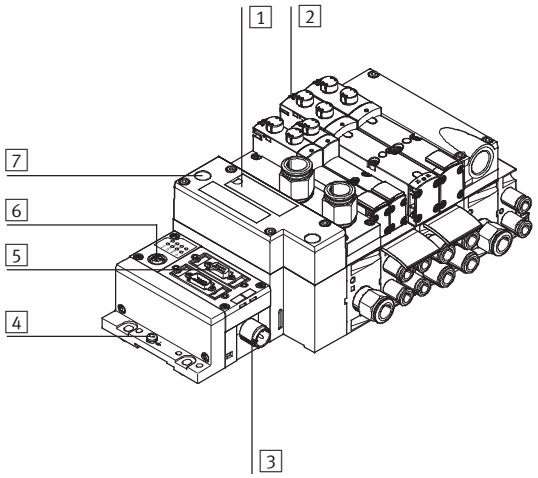


1 Pressure gauge (optional)
2 Adjusting knob of optional pressure regulator plate
3 Manual override (for each pilot solenoid coil, non-detenting or non-detenting/detenting)
4 Optional cover cap for manual override (prevents usage of manual override)
5 Optional cover cap for manual override with non-detenting function
6 Inscription label holder for valve
7 Adjusting screw of optional flow control plate
8 Exhaust ports "valves" (3/5)
9 Pilot ports 12 and 14 for supplying the external pilot air
10 Inscription label holder for sub-base
11 Supply port 1 "operating pressure"
12 Working lines 2 and 4, for each valve position

- Note

A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

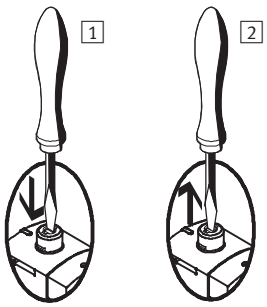
Electrical connection and display components



1 Inscription area and cover for H-rail mounting
2 Yellow LEDs: signal status display for pilot solenoid coils
3 Power supply connection
4 Earth terminal
5 Fieldbus connection (bus-specific)
6 Service interface for handheld unit, etc.
7 Red LED: common error display for valves

Manual override (MO)

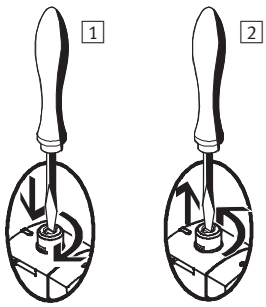
MO with automatic return (non-detenting)



1 Press in the stem of the manual override using a pointed object or screwdriver.
Valve is then switched

2 Remove the pointed object or screwdriver.
Spring force pushes the stem of the manual override back.
Valve returns to initial position (not with double solenoid valve code J).

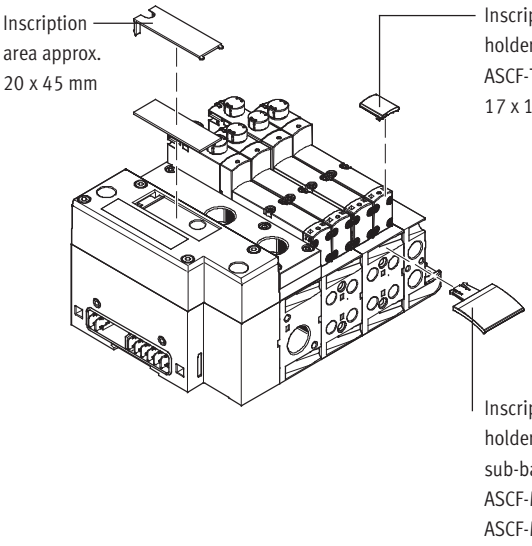
MO set via turning (covered)



1 Press in the stem of the manual override using a pointed object or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
Valve remains switched

2 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. Spring force pushes the stem of the manual override back. Valve returns to initial position (not with double solenoid valve code J and D).

Identification system



Inscription label holders can be applied to the valves and manifold sub-bases to identify them. These inscription label holders can be ordered by entering the code B or T in the order code for accessories.
Scope of delivery: inscription label holder including inscription label.
The following inscription labels can be used as spares:

- Inscription label holder for valve type ASCF-T-S6: Part No. 540888
- Inscription label holder for manifold sub-base type ASCF-M-S6: Part No. 540889
- Inscription label holder for manifold sub-base (for valve width 52 mm) type ASCF-M-S2-2: Part No. 562577

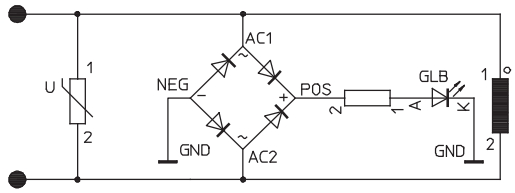
Large inscription labels can be attached to the pneumatic interface as an alternative or in addition to the smaller labels.

Protective circuit

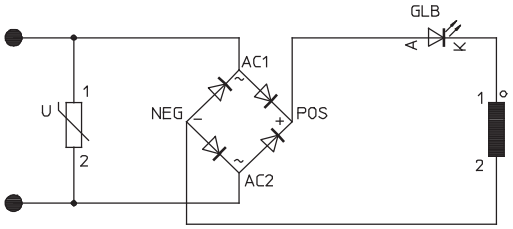
Each VSVA solenoid coil is protected with a spark arresting protective circuit as well as against polarity reversal.

The 24 V DC version of width 52 mm additionally features integrated holding current reduction.

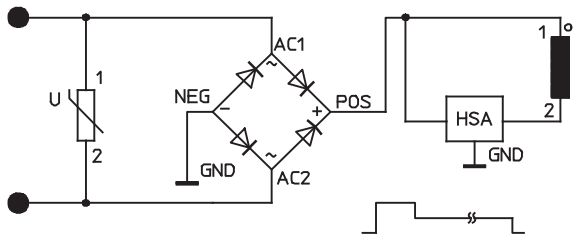
24 V DC version (width 18 to 42 mm)



110 V AC version (width 18 to 52 mm)



24 V DC version (width 52 mm)



Individual valve

Valves can also be used on individual sub-bases for actuators further away from the valve terminal.

- Electrical connection M12, 4 pin
  24 V DC
- 4-pin clamped terminal connection for configuration by the user
  24 V DC or 110 V AC
- Cable (open end) for configuration by the user
  24 V DC or 110 V AC

Individual electrical connection

A maximum of 20 solenoid coils can be actuated. 2 solenoid coils per valve can be addressed.

Individual electrical connection:

- M12
- 6-way or 10-way
- 5-pin
- 24 V DC

Valve terminals type 44/45, VTSA/VTSA-F

Key features – Electrical components – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

Electrical multi-pin plug connection

The following multi-pin plug connection variants are offered for the valve terminal VTSA/VTSA-F:

- Sub-D multi-pin plug connection (37-pin for 24 V DC): this valve terminal is available with 1 ... 16 valve positions equipped with double solenoid valves and 1 ... 32 valve positions equipped with single solenoid valves. A maximum of 32 solenoid coils can be actuated.
- Terminal box (terminal strip for 24 V DC or 110 V AC): this valve terminal is available with 1 ... 16 valve positions equipped with double solenoid valves and 1 ... 32 valve positions equipped with single solenoid valves. A maximum of 32 solenoid coils can be actuated.
- Multi-pin node (round plug connector): electrical multi-pin plug connection with round plug connector, 19-pin to CNOMO E03.62.530.N, connecting thread M23 for 24 V DC. The valve terminals can be fitted with max. 16 solenoid coils.

The valves are switched by means of positive or negative logic (PNP or NPN). Mixed operation is not permitted.

Each pin on the Sub-D multi-pin plug or terminal box (terminal strip) can actuate exactly one solenoid coil. If the maximum configurable number of valve positions is 32, this means that 32 valves, each with a single solenoid coil, can be addressed. With 16 or fewer valve positions, 2 solenoid coils per valve can be addressed.

Note

Use the following 37-pin connecting cables from Festo to connect the valve terminal VTSA/VTSA-F with Sub-D multi-pin plug connection:

- NEBV-S1W37-...-LE10 for max. 8 solenoid coils
- NEBV-S1W37-...-LE26 for max. 22 solenoid coils
- NEBV-S1W37-...-LE37 for max. 32 solenoid coils
- NECV-S1W37 pre-assembled plug connector

AS-interface connection

Valve terminals VTSA/VTSA-F with AS-interface connection can be expanded with up to 8 valves with max. 8 solenoid coils.
The valve terminal with AS-interface connection is based on the same electrical manifold module as the valve terminal with multi-pin plug connection.
This means it is possible to convert a valve terminal with multi-pin plug connection using an AS-interface module.

- The technical specifications of the AS-interface system must be observed in this case.

Note

AS-i module VAEM-S6-S-FAS-4-4E.
Always operate solenoid valves with additional power supply if 4 solenoid coils (width 52 mm) are supplied with current simultaneously.
More information can be found at:
➔ Internet: as-interface

Fieldbus connection/control block

All functions and features of the electrical peripherals CPX are permitted in connection with the CPX interface. This means:

- The valves and electrical outputs are supplied via the operating voltage connection CPX.
- The valves are supplied and switched off independently via a separate port on the CPX.

Note

More information can be found at:
➔ Internet: cpx

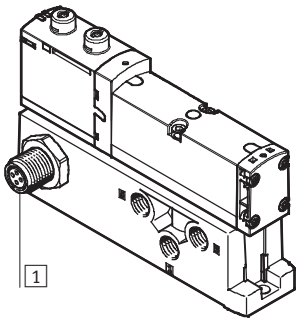
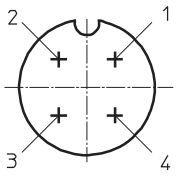
Pin 12: earth
Pin 19: unused

Rules for addressing

- Address allocation does not depend on whether single or double solenoid valves are fitted.
- Addresses are allocated in ascending order without gaps, from left to right.
- A valve position for actuating one solenoid coil occupies one address (type VABV-...-...T1).
- A valve position for actuating two solenoid coils occupies two addresses (type VABV-...-...T2). The following allocation applies in this case:
  - Coil 14: lower-value address
  - Coil 12: higher-value address

Electrical connection, individual valve with connector plug 24 V DC up to width 52 mm





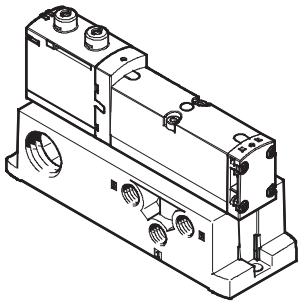
1 Connector plug M12x1, 4-pin to EN 61076-2-101

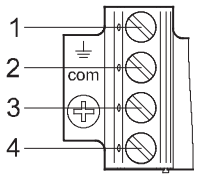
Pin allocation M12 on individual valve to ISO 20401

With positive logic:
- Pin1 – Unused
- Pin2 – U_B for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 – U_B for coil 14

With negative logic:
- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 – U_B for coil 12 and 14
- Pin4 – 0 V for coil 14

Electrical connection, individual valve 24 V DC or 110 V AC up to width 52 mm



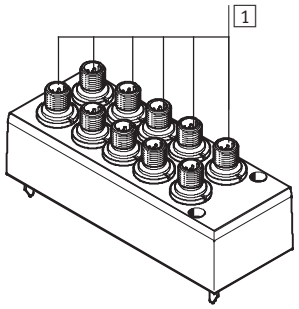


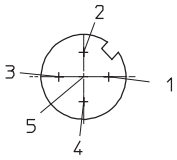
Pin allocation for assembly by the user

With positive logic:
- Pin1 – Unused (with 110 V AC connection for earthing)
- Pin2 – U_B for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 – U_B for coil 14

With negative logic:
- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 – U_B for coil 12 and 14
- Pin4 – 0 V for coil 14

Individual electrical connection, 6-way or 10-way, 24 V DC, code MP2/MP3 for valve terminal up to width 52 mm





1 Connector plug M12x1, 5-pin

Pin allocation M12
With positive logic:
- Pin1 – Unused
- Pin2 – U_B for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 – U_B for coil 14
- Pin5 – Functional earth

Pin allocation M12
With negative logic:
- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 – U_B for coil 12 and 14
- Pin4 – 0 V for coil 14
- Pin5 – Functional earth

Note

Mixed operation of positive switching (PNP) and negative switching (NPN) control signals is not permitted.

System equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life.
The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils
When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m^3 must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils
When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m^3 must not be exceeded (see ISO 8573-1 Class 4).
A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

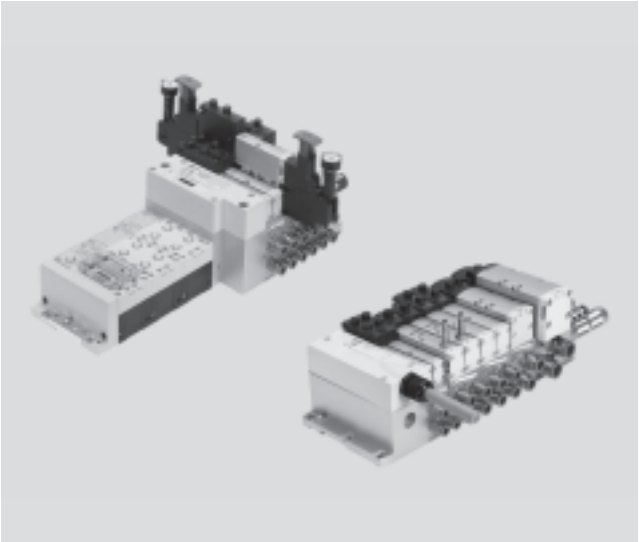
Valve terminals type 44/45, VTSA/VTSA-F

Technical data – Valve terminal – ISO 15407-2, width 18 and 26 mm; ISO 5599-2, width 42 and 52 mm

- Valve width
  to ISO 15407-2
  • 18 mm
  • 26 mm
  to ISO 5599-2
  • 42 mm (ISO 1)
  • 52 mm (ISO 2)

- Voltage
  24 V DC
  110 V AC

- Flow rate
  Width 18 mm:
  up to 550 (700) l/min
  Width 26 mm:
  up to 1,100 (1,400) l/min
  Width 42 mm:
  up to 1,400 l/min
  Width 52 mm:
  up to 2,900 l/min



Values in brackets apply to VTSA-F

General technical data					
Design		Piston spool valve			
Sealing principle		Soft			
Actuation type		Electrical			
Type of control		Piloted			
Exhaust function, with flow control		Via flow control plate			
Lubrication		Lubricated for life			
Type of mounting		Wall mounting			
		On H-rail to EN 60715			
Mounting position		Any			
Manual override		Non-detenting, detenting, covered			
Valve terminal design		Modular and expandable			
Max. no of valve positions		32			
Pneumatic connections – Threaded connection					
Width		18 mm	26 mm	42 mm	52 mm

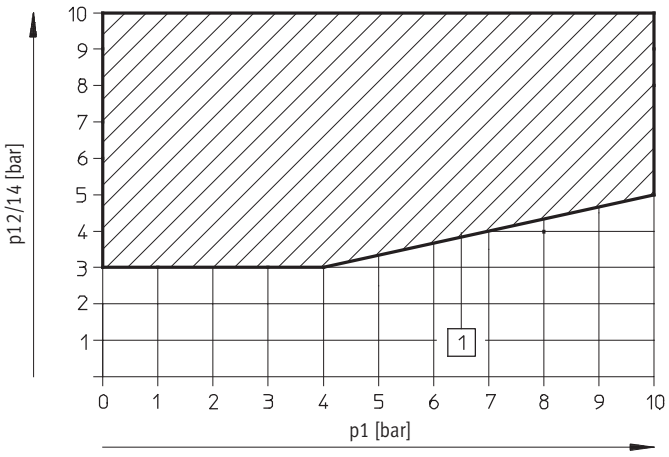
Pilot pressure p12/14 as a function of operating pressure p1

for 3/2-way valves



[1] Operating range for valves with external pilot air supply

Note

Reversible 3/2-way valves (flow direction reversible only)

- These values must only be operated on pressure zones with reversible supply (3 and 5 with supply pressure 1 as exhaust air) or on a reversible pressure regulator. If necessary create pressure separation zones with duct separation.
- Reversible 3/2-way valves do not permit the special function "pilot exhaust air ducting"
- Ports 12 and 14 on the end plate variants must be supplied with the same pressure
- Right-hand end plate with pilot air selector: can be realised via position 1 or 2
- Right-hand end plate with threaded connections: 12 and 14 must be supplied with the same pressure level

Valve switching times

Valve function order code[1]		VC	VV	N	K	H	P	Q	R	M	O	J	D	B	G	E	SA	SB

Valve terminals type 44/45, VTSA/VTSA-F

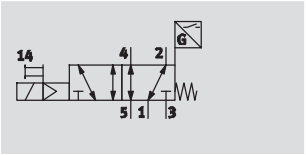
Solenoid valve with switching position sensing

FESTO

Function[1)]

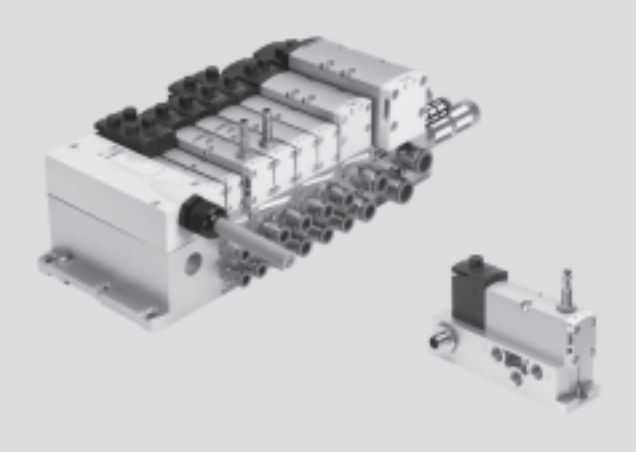


Flow rate
950 l/min

Valve width
26 mm

Voltage
24 V DC

Operating pressure
3 ... 10 bar



ISO valves with switching position sensing for safety-oriented pneumatic components

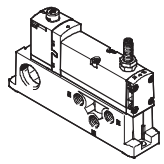
Function

The single solenoid 5/2-way valve with spring return in width 26 mm features valve diagnostics. Designed as plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. The normal position of the piston spool valve is monitored by the inductive sensor.

This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC. For use in higher categories, the sensor signal from the valve must be evaluated by the control system.

This valve is suitable for use in safety-related parts of control systems to EN ISO 13849-1. This valve is designed for installation in machines or automated systems and must only be used in industrial applications (high-demand mode).

Decentralised individual connection variant

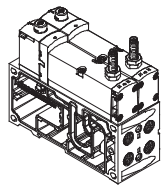


Valve on individual sub-base (square plug or plug-in), with integrated piston position sensing.

The electrical connection is established either via a standardised 4-pin M12 plug 24 V DC (ISO 15407-2), 4-pin spring-loaded terminal or a cable (open end)

24 V DC/110 V AC, which are configured by the user. The individual sub-base can be supplied with internal or external pilot air depending on the version.

Variant for valve terminal VTSA/VTSA-F



The valves with integrated piston position sensing in plug-in design for valve terminal VTSA/VTSA-F can be used regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

Pilot air supply:
The valve terminal can be supplied with internal or external pilot air via the various end plate variants.

Note

Valves in plug-in design always get their pilot air from duct 14 in the manifold sub-base.

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

Valve terminals type 44/45, VTSA/VTSA-F

FESTO

Technical data – Solenoid valve with switching position sensing

General technical data			
Valve		VSVA-B-M52-MZD-A1-1T1L-...- on valve terminal	VSVA-B-M52-MZ-A1-1C1-...-
Width		26 mm	
Design		Piston spool valve	
Sealing principle		Soft	
Actuation type		Electrical	
Type of control		Piloted	
Exhaust function, with flow control		Via individual sub-base, via flow control plate	
Lubrication		Lubricated for life	
Type of mounting		Via through-hole, on manifold sub-base	
Mounting position		Any	
Manual override		Covered	
Individual sub-base			
Pneumatic connection		Threaded connection	Fitting
Supply port	1	G¼	QS-G¼-8 QS-G-¼-10 QS-G¼-12
Exhaust port	3/5	G¼	QS-G¼-8 QS-G-¼-10 QS-G¼-12
Working lines	2/4	G¼	QS-G¼-8 QS-G-¼-10 QS-G¼-12
Pilot air supply port	14	G⅛	QS-G⅛-6 QS-G⅛-8
Pilot exhaust air port	12	G⅛ [1]	QS-G⅛-6 QS-G⅛-8
Valve terminal			➔58

1) Pilot exhaust air port 12 vents directly at the valve, without a connection.
Note: if the customer requests a “turned seal”, exhaust air is vented at the end plates of the valve terminal, which does not conform to the ISO standard.

Standard nominal flow rate [l/min]

	–	5/2-way valve, single solenoid, mechanical spring return, with switching position sensing via inductive sensor with NPN output and 3-pin sensor push-in connector M8	26 mm	**560745**	**VSVA-B-M52-MZ-A1-1C1-ANP**

Note

The sensors contained in the valves must not be replaced. Incorrect assembly can result in malfunctions or damage to the valve. Return the module to Festo for maintenance in the event of a fault.

Valves with switching position sensing from the VSVA-B-M52 -...- series can only be ordered individually. If these are used on a valve terminal, appropriate vacant positions must be provided for them.
Exceptions are the two valves with ident. code SO and SQ.

Valve terminals type 44/45, VTSA/VTSA-F

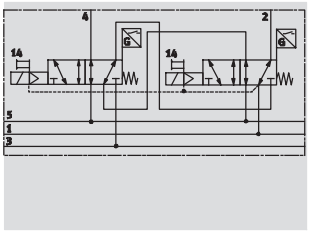
Control block with safety function – Width 26 mm

FESTO

Function[1)]

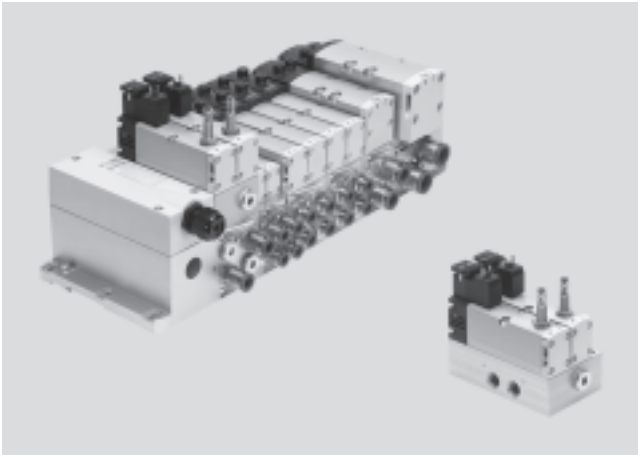


Flow rate
950 l/min

Valve width
26 mm

Voltage
24 V DC

Operating pressure
3 ... 10 bar



Description

The control block is designed for two-channel actuation of pneumatic drive components such as double-acting linear cylinders, for example, and can be used to realise the following protective measures:

- Protection against unexpected start-up (EN 1037)
- Reversing hazardous movements, provided the reversing motion will not result in further hazards

The control attributes of the control block enable a performance level e to be achieved for the safety measures. The control block has been developed and manufactured in accordance with the basic and proven safety principles of EN ISO 13849–2.
The requirements of EN ISO 13849 (e.g. CCF, DC) must be taken into consideration for use in higher categories (2 to 4).

The basic safety principles of EN ISO 13849–2 relating to implementation and operation of the component must be satisfied. For category 2 to 4, the proven safety principles to EN ISO 13849–2 for implementation and operation of the component must be satisfied. When using this product in machines or systems subject to specific C standards, the requirements specified in these standards must be observed.

The control block with safety function is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode). The control block with safety function is suitable for use as a press safety valve to EN 962.

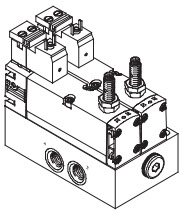
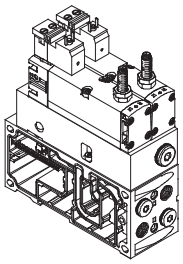
Decentralised individual connection variant, width 26 mm



Two solenoid valves on manifold sub-base with square plugs and integrated piston position sensing.

The electrical connection for the solenoid valves is established separately via a standardised square plug to DIN EN 175301–803, type C. The piston position sensing feature of the inductive PNP or NPN proximity sensor is realised using a push-in connector in the size M8x1 to EN 61076–2–104.

Vertical stacking variant for valve terminal VTSA/VTSA-F, width 26 mm



The valves with integrated piston position sensing on manifold sub-base for valve terminal VTSA/VTSA-F must be supplied with electrical power regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

The electrical connection for the solenoid valves is established separately via a standardised square plug to DIN EN 175301–803, type C. The piston position sensing feature of the inductive PNP or NPN proximity sensor is realised using a push-in connector in the size M8x1 to EN 61076–2–104.

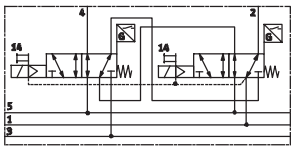
1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

Valve terminals type 44/45, VTSA/VTSA-F

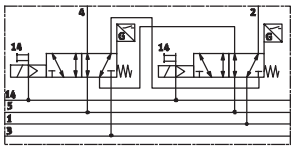
Technical data – Control block with safety function – Width 26 mm

Function – Pneumatic/electrical interlinking

Individual connection variant



Vertical stacking variant
(on valve terminal)



The safety function is achieved through two-channel pneumatic interlinking of two single solenoid 5/2-way directional control valves within the control block: port (4) is only fed with compressed air if both solenoid valves are switched to switching position (14).
Port (2) is always fed with compressed air if at least one of the two solenoid valves is in normal position. The valve is reset via a mechanical spring.

The switching operation of the solenoid valves can be monitored by sensing the proximity sensors at the solenoid valves. This is done by linking the control signal and signal change of the proximity sensor so that it is possible to check whether the piston spools of the solenoid valves are reaching or leaving the normal position (expectations).

The piston spools of the solenoid valves are designed so that pneumatic short circuits between the ports (2) and (4) are ruled out (freedom from overlap).

To achieve the required category, the two solenoid valves must be actuated via two separate channels.

Description

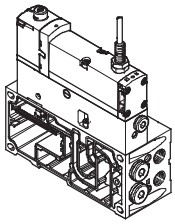
The pilot air switching valve is designed to switch pilot air from duct 1 to 14.

This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC. For use in higher categories, the sensor signal from the valve must be evaluated by the control system.

This valve is suitable for use in safety-related parts of control systems to EN ISO 13849–1. This valve is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).

More information and technical data
➔ Internet: manual

Vertical stacking variant for valve terminal VTSA/VTSA-F, width 26 mm



The pilot air switching valve with integrated piston position sensing on manifold sub-base for valve terminal VTSA/VTSA-F is supplied with electrical power regardless of the type of electrical actuation of the valve terminal.

This module is supplied pre-assembled together with the valve terminal VTSA/VTSA-F. No other assembly steps are required before installation.

The piston sensing feature of the inductive PNP proximity sensor is realised using a cable and a push-in connector in the size M12x1 to EN 61076–2–104.

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts.
The switching element function of the sensors used here is designed as an N/C contact.

Note

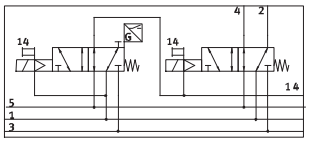
The pilot air switching valve can only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external pilot air type VABE-S6-1RZ-.... Port 14 on the right-hand end plate must be sealed for this.

Valve terminals type 44/45, VTSA/VTSA-F

Technical data – Pilot air switching valve – Width 26 mm

FESTO

Function – Pneumatic/electrical interlinking



The function for switching off the pilot air is achieved on this module by combining the vertical stacking plate type VABF-S4-1-S with the single solenoid 5/2-way valve type VSVA-B-M52-MZD-A1-1T1L-APX-0,5. The valve terminal is not supplied with any pilot air via the right-hand end plate type VABE-S6-1 (ident. code XS, external pilot air). Port 14 on the end plate is sealed.

The pilot air for the valve is branched from duct (1) in the vertical stacking plate and redirected to the pilot air duct (14) of the valve terminal when the valve is in the switching position. Ports (2) and (4) of the manifold sub-base are sealed with blanking plugs. The switching operation of the solenoid valve can be monitored by sensing the proximity sensor in the solenoid valve.

This is done by linking the control signal and signal change of the proximity sensor so that it is possible to check whether the piston spool of the solenoid valve is reaching or leaving the normal position (expectations). The piston spool of the solenoid valve is designed so that pneumatic short circuits between ports (2) and (4) are ruled out (freedom from overlap).

Note

A valve from the VTSA/VTSA-F modular system can be planned or configured to the right of the valve with piston position sensing on the vertical stacking plate of the pilot air switching valve.

Description

Function

The purpose of the soft-start valve is to slowly and safely build up the supply pressure in duct 1 of the valve terminal or to quickly vent it.
Switch-on takes place in two stages:

- First the working pressure provided for duct 1 gradually increases (the speed can be adjusted using a flow control screw).
- Once the working pressure in duct 1 reaches a previously set value, the soft-start valve switches the full operating pressure at duct 1 of the valve terminal.

The switching point for full operating pressure is set to 4 bar at the factory, but can be changed using an adjusting screw.
The full operating pressure is applied to duct 14 (pilot air) at all times. This pressure causes the valves on the valve terminal to immediately move to the required switching position.
When the valve is not switched, duct 1 of the valve terminal is exhausted via the soft-start valve's exhaust port.
A self-resetting manual override is available for maintenance and service purposes.

Diagnostics

The piston position of the soft-start valve can be monitored by a sensor with integrated LED display. This sensor registers whether the valve has switched and thus whether the valve terminal is being supplied with air.
Pressure sensing via a pressure gauge (optional) is also possible.
The soft-start valve can alternatively be ordered with a sensor (retrofitting of a sensor is very complicated due to the necessary sensor calibration).
Connecting cables with integrated LED display are provided for displaying the signal status.

Pilot air supply

The valve terminal can either be supplied with internal pilot air via the soft-start valve or with internal or external pilot air via the various end plate variants. The type of pilot air supply is determined by the seal of the soft-start valve.
The scope of delivery of the soft-start valve includes both the seal for internal pilot air supply and the seal for external pilot air supply.

Restrictions

Compressed air supply

There must be no other elements supplying compressed air in the pressure zone in which the soft-start valve is being operated.

Exhaust air

Exhaust air cannot be expelled via the soft-start valve. If it is being operated in a pressure zone with duct 3/5 separated, an exhaust plate is required.

Pilot air supply

If internal pilot air supply (duct 14) via the soft-start valve is chosen, there must be no other pilot air supply within the valve terminal.

Reverse operation

The soft-start valve is not approved for reverse operation.

Valve terminals type 44/45, VTSA/VTSA-F

	–	Lateral connections, G3⁄8	42 mm	**546101**	**VABS-S2-1S-G38-R3**
	–	Lateral connections, G1⁄2	52 mm	**555640**	**VABS-S2-2S-G12-R3**
Individual sub-base, port pattern to ISO 15407-2 and ISO 5599-2, electrical connection via plug connector M12, with ATEX certification					
	Threaded connection, internal pilot air supply				
	–	Lateral connections, G1⁄8	18 mm	**563067**	**VABS-S4-2S-G18-B-R3-EX2**
	–	Lateral connections, G1⁄4	26 mm	**563069**	**VABS-S4-1S-G14-B-R3-EX2**
	–	Lateral connections, G3⁄8	42 mm	**563071**	**VABS-S2-1S-G38-B-R3-EX2**
	–	Lateral connections, G1⁄2	52 mm	**567704**	**VABS-S2-2S-G12-B-R3-EX2**
	Threaded connection, external pilot air supply				
	–	Lateral connections, G1⁄8	18 mm	**563066**	**VABS-S4-2S-G18-R3-EX2**
	–	Lateral connections, G1⁄4	26 mm	**563068**	**VABS-S4-1S-G14-R3-EX2**
	–	Lateral connections, G3⁄8	42 mm	**563070**	**VABS-S2-1S-G38-R3-EX2**
	–	Lateral connections, G1⁄2	52 mm	**567703**	**VABS-S2-2S-G12-R3-EX2**
Individual sub-base, port pattern to ISO 15407-2, electrical connection via cable terminals					
	Threaded connection, internal pilot air supply				
	–	Lateral connections, G1⁄8	18 mm	**541067**	**VABS-S4-2S-G18-B-K2**
	–	Lateral connections, G1⁄4	26 mm	**541065**	**VABS-S4-1S-G14-B-K2**
	Threaded connection, external pilot air supply				
	–	Lateral connections, G1⁄8	18 mm	**539723**	**VABS-S4-2S-G18-K2**
	–	Lateral connections, G1⁄4	26 mm	**539725**	**VABS-S4-1S-G14-K2**

Designation	Code	Description	Width	Part No.	Type
Individual sub-base, port pattern to ISO 5599-2, electrical connection via spring-loaded terminal					
	Threaded connection, internal pilot air supply				
	–	Lateral connections, G3⁄8	42 mm	**546762**	**VABS-S2-1S-G38-B-C1**
	–	Lateral connections, G1⁄2	52 mm	**555643**	**VABS-S2-2S-G12-B-C1**
	Threaded connection, external pilot air supply				
	–	Lateral connections, G3⁄8	42 mm	**546760**	**VABS-S2-1S-G38-C1**
	–	Lateral connections, G1⁄2	52 mm	**555638**	**VABS-S2-2S-G12-C1**
Individual sub-base, port pattern to ISO 5599-2, electrical connection via cable (open end)					
	Threaded connection, internal pilot air supply				
	–	Lateral connections, G3⁄8	42 mm	**546102**	**VABS-S2-1S-G38-B-K1**
	–	Lateral connections, G1⁄2	52 mm	**555641**	**VABS-S2-2S-G12-B-K1**
	Threaded connection, external pilot air supply				
	–	Lateral connections, G3⁄8	42 mm	**546099**	**VABS-S2-1S-G38-K1**
	–	Lateral connections, G1⁄2	52 mm	**555636**	**VABS-S2-2S-G12-K1**
Plug socket for electrical connection of individual valves					
	–	Angled socket, 4-pin, screw terminal, union nut M12		**185498**	**SEA-M12-4WD-PG7**
Connecting cable for electrical connection of individual valves at the individual electrical connection, 6-way or 10-way					
	–	Angled socket, 4-pin, M12 plug, cable length 5 m		**164258**	**SIM-M12-4WD-5-PU**
	–	Straight socket, 5-pin, M12 plug, cable length 5 m		**541364**	**NEBU-M12G5-K-5-LE3**
	–	Angled socket, 5-pin, M12 plug, cable length 5 m		**541370**	**NEBU-M12W5-K-5-LE3**
	–	Modular system for connecting cables		–	**NEBU-...** ➔ Internet: nebu
Illuminating seal for plug pattern DIN EN 175301-803, type C					Technical data ➔ Internet: meb-ld
	–	12 ... 24 V DC		**151717**	**MEB-LD-12-24DC**
	–	230 V AC		**151718**	**MEB-LD-230AC**
Pneumatic connection accessories					
A selection of possible fittings, blanking plugs, silencers and other pneumatic accessories can be found in the chapter **Accessories** ➔ page 139 or on the Internet via the individual search terms: **Internet** ➔ connection technology, silencer, blanking plug
